Vaginal birth is the most common mode of birth worldwide. It involves three stages of labour: the shortening and opening of the cervix during the first stage, descent and birth of the baby during the second, and the birth of the placenta during the third. During the first stage, contractions gradually become stronger and closer together. The postpartum period is the time of recovery for the mother and infant, in which both newborn and mother are monitored. All major health organisations advise that immediately after giving birth, regardless of the mode of birth, that the infant be placed on the mother's chest (termed skin-to-skin contact), and to delay any other routine procedures for at least one to two hours or until the baby has had its first breastfeeding.

The vagina has evoked strong reactions in societies throughout history, including negative perceptions and language, cultural taboos, and their use as symbols for female sexuality, spirituality, or regeneration of life. In common speech, the word "vagina" is often used incorrectly to refer to the vulva or to the female genitals in general.

== Early life and career == The word entered English from late Latin via Greek περίναιος ~ περίνεος perinaios, perineos, itself from περίνεος, περίνεοι 'male genitals' and earlier περίς perís 'penis' through influence from πήρής pērís 'scrotum'. The term was originally understood as a purely male body-part with the perineal raphe seen as a continuation of the scrotal septum since masculinization causes the development of a large anogenital distance in men, in comparison to the corresponding lack of distance in women. As a result of folk etymologies (such as ἰνάω ináō, "to carry off by evacuations"), it... == College career == The structure of the mammalian eye has a laminar organization that can be divided into three main layers or tunics whose names reflect their basic functions: the fibrous tunic, the vascular tunic, and the nervous tunic.
