== Sovereign states ==

The Central African Republic mainly consists of Sudano-Guinean savanna, but also includes a Sahelo-Sudanian zone in the north and an equatorial forest zone in the south. Two-thirds of the country is within the basin of the Ubangi River (a tributary of the Congo River), while the remaining third lies in the basin of the Chari River, which flows into Lake Chad.

With the Age of Discovery, during the 15th to 18th centuries, world maps became increasingly accurate; exploration of Antarctica, Australia, and the interior of Africa by Western mapmakers was left to the 19th and early 20th century.

The values are connected to the economic

Early world maps (180 sq ft) of silk. The developments of Greek geography during this time, notably by Eratosthenes and Posidonius culminated in the Roman era, with Ptolemy's world map (2nd century CE), which would remain authoritative throughout the Middle Ages. The Gangnido (‘Map of Integrated Lands and Regions of Historical Countries and Capitals (of China)’;) is a world map and historical map of China The earliest known world maps date to classical antiquity, the oldest examples of the 6th to 5th centuries BCE still based on the flat Earth paradigm. Since Ptolemy, knowledge of the approximate size of the Earth allowed cartographers to estimate the extent of

African Map With Names Of Countries

their geographical knowledge, and to indicate parts of the planet known to exist but not yet explored as terra incognita. World maps assuming a spherical Earth first appear in the Hellenistic period

The only part of Africa well known in antiquity was the coast of North Africa, described in Greek periplus from the 6th century BC. Hellenistic era geographers defined Ancient Egypt as part of Asia, taking the boundary of Asia and Egypt to lie at the Catabathmus Magnus (the escarpment of Akabah el-Kebir in western Egypt). Ptolemy's world map (2nd century...

Map Maps were important In cartography, a map is a representation or abstraction of geographic reality. Specialized maps, called charts, are used for nautical navigation (nautical charts) and aviation (aeronautical charts). Scientists use maps to organize spatial data in fields such as geology, meteorology, seismology and demographics. Maps are used for a wide range of

African Map With Names Of Countries

purposes, including navigation, scientific research, governance, and warfare. Governments use maps for administrative functions such as census, electoral districts, property taxation, dispatching police, and coordinating disaster relief. Military and security organizations use maps for mission planning, surveillance, border management, logistics, and intelligence analysis. were drawing maps of their known world, encompassing the Mediterranean Sea and most of Europe, North Africa, and the Middle East. A common use is route planning, which enables users to find their way to their destination

List of sovereign states and dependent territories in Africa and dependent territories of both African and non-African states. Egypt, although extending into Asia through the Sinai Peninsula, is considered an African state. It includes fully recognised states, states with limited or zero recognition, and dependent territories of both African and non-African states. Malta and parts of France, Italy, Portugal, and Spain are located on the African continental plate, some considerably closer to the African mainland than the European mainland but, politically, are generally considered to be European by convention. It lists 56 sovereign states (54 of which are member states of the United Nations), two non-sovereign (dependent) territories of non-African sovereign states, and nine sub-national regions of non-African sovereign states. It lists 56

in Central Africa. The Central African Republic (CAR) is a landlocked country in Central Africa

A notable indigenous map was devised by Ibrahim Njoya, king of the Bamum kingdom, completed around 1920. Njoya deployed surveyors to map his kingdom who used methods such as timing their walks to measure distances and collecting information from locals. The map used the native Bamum script to write down the names of towns and natural features.

Cartography of Africa the names of towns and natural features. The earliest cartographic depictions of Africa are found in early world maps. In classical antiquity, Africa (also == Indigenous maps ==

The map depicts closely linked cultural values that vary between societies in two predominant dimensions: traditional versus

African Map With Names Of Countries

secular-rational values on the vertical y-axis and survival versus self-expression values on the horizontal x-axis. Moving upward on this map reflects the shift from traditional values to secular-rational ones and moving rightward reflects the shift from survival values to self-expression values. According to the authors: "These two dimensions explain more than 70 percent of the cross-national variance in a factor analysis of ten indicators—and each of these dimensions is strongly correlated with scores of other important orientations." ba0d94d08f
