== Origin and insertion == History ==

Depressor supercilii muscle PMC 2750763.) and many authorities consider it to be part of the orbicularis oculi muscle. PMID 19531159. Like the name suggests, the muscle depresses the eyebrow to form oblique lines. The nature of this muscle is in some dispute. Few printed anatomies include it (Netter, et al. Illustration in Facial Action Coding System ent/134 at eMedicine "Botox Injections for Hyperfunctional Facial Lines" v t e - The depressor supercilii is an eye muscle of the human body

Smile Although cross-cultural studies have shown that smiling is a means of communication throughout the world, there are large differences among different cultures, religions, and societies, with some using smiles to convey confusion, embarrassment, or awkwardness. Some smiles include a contraction of the muscles at the corner of the eyes, an action known as a Duchenne smile. Among humans, a smile expresses delight, sociability, happiness, joy, or amusement. Fischer, Andrea (11 September 2013). It is distinct from a similar but usually involuntary expression of anxiety known as a grimace. "FDA approves Botox Cosmetic to improve the appearance of crow's feet lines". Smiles can not only be seen but heard when people talk. Archived from the original A smile is a facial expression formed primarily by flexing the muscles at the sides of the mouth. January 2011. FDA

Botulinum toxin Botulinum toxin was developed as a biological agent by the Soviet, United States, and Iraqi biological weapons programs. In strongly diluted form, the toxin is also used for medical and cosmetic purposes. It prevents the release of the neurotransmitter acetylcholine from axon endings at the neuromuscular junction, thus causing flaccid paralysis. The toxin causes the disease botulism. Botulinum toxin, botulinum neurotoxin, or botox is a neurotoxic protein produced by the bacterium Clostridium botulinum and related species, and it is Botulinum toxin, botulinum neurotoxin, or botox is a neurotoxic protein produced by the bacterium Clostridium botulinum and related species, and it is considered the deadliest known natural substance ever recorded in chemical literature. Botulinum toxin is an acetylcholine release inhibitor and a neuromuscular blocking agent

The seven main types of botulinum toxin are named types A to G (A, B, C1, C2, D, E, F and G). New types are occasionally found. Types A and B are capable of causing disease in humans, and are also used commercially and medically. Types C-G are less common. On the other hand, many dermatologists, ophthalmologists, and plastic surgeons hold that the depressor supercilii is a distinct muscle and has a definite, individual effect on the movement of the eyebrow and skin of the glabella. == Skin == Primatologist Signe Preuschoft traces the smile back over 30 million years of evolution to a "fear grin" stemming from monkeys and apes, who often used bare clenched teeth to portray to predators that they were harmless or to signal submission to more dominant group members. The smile may have evolved differently among species, especially among humans.

The first documented medical discussion about a forehead lift was written in 1910 by the German surgeon Erich Lexer. Intoxication can occur naturally as a result of either wound or intestinal infection or by ingesting formed toxin in food. The estimated...

Wrinkle Age wrinkling in the skin is promoted by habitual facial expressions, aging, sun damage, smoking, poor hydration, and various other factors. Besides its cosmetic application, Botox is A wrinkle, also

Botox For 11 Lines

known as a rhytid, is a fold, ridge or crease in an otherwise smooth surface, such as on skin or fabric. Skin wrinkles typically appear as a result of ageing processes such as glycation, habitual sleeping positions, loss of body mass, sun damage, or temporarily, as the result of prolonged immersion in water. In humans, it can also be prevented to some degree by avoiding excessive solar exposure and through diet (in particular through consumption of carotenoids, tocopherols and flavonoids, vitamins (A, C, D and E), essential omega-3-fatty acids, certain proteins and lactobacilli). Botox is a specific form of botulinum toxin manufactured by Allergan for both therapeutic and cosmetic use a13b9891fe

Forehead lift wrinkle remover, Botox (Dysport in the United Kingdom and Europe) many consumers have eschewed the invasive surgery altogether, opting for Botox injections A forehead lift, also known as a browlift or browplasty, is a cosmetic surgery procedure used to elevate a drooping eyebrow that may obstruct vision and/or to remove the deep "worry" lines that run across the forehead a13b9891fe

The depressor supercillii originates on the medial orbital rim, near the lacrimal bone, and inserts on the medial aspect of the bony orbit, inferior to the corrugator supercillii. In some specimens it exhibits two heads and in others, only one. a13b9891fe
