

Loose Stools After Eating

The most common cause is an infection of the intestines due to a virus, bacterium, or parasite—a condition also known as gastroenteritis. These infections are often acquired from food or water that has been contaminated by feces, or directly from another person who is infected. The three types of diarrhea are: short duration watery diarrhea, short duration bloody diarrhea, and persistent diarrhea (lasting more than two weeks, which can be either watery or bloody). The short duration watery diarrhea may be due to cholera, although this is rare in the developed world. If blood is present, it is also known as dysentery... 85358e6523

Human feces have similarities to the feces of other animals and varies significantly in appearance (i.e. size, color, texture), according to the state of the diet, digestive system, and general health. Normally, human feces are semisolid, with a mucus coating. Small pieces of harder, less moist feces can sometimes be seen impacted in the distal (final or lower) end. This is a normal occurrence when a prior bowel movement is incomplete, and feces are returned from the rectum to the large intestine, where water is further absorbed. 85358e6523 In 2000, the City of Ottumwa pursued the construction of a downtown parking ramp in the current location of the canteen, offering to purchase... 85358e6523 Canteen Lunch in the Alley contains a horseshoe-shaped counter-top surrounded by 16 stools, typical of early to mid-20th-century lunchrooms that gained popularity in the Great Depression.
