

Does Pre Come Contain Sperm

== History == 1dc0413204

Pygmy sperm whale sea, and most of what is known about them comes from the examination of stranded specimens. They are not often sighted at sea, and most of what is known about them comes from the examination of stranded specimens. The pygmy sperm whale was first described by naturalist Henri The pygmy sperm whale (*Kogia breviceps*) is one of two extant species in the family Kogiidae in the sperm whale superfamily 1dc0413204

Coitus interruptus been suggested that the pre-ejaculate ("Cowper's fluid") emitted by the penis prior to ejaculation may contain spermatozoa (sperm cells), which would compromise Coitus interruptus, also known as withdrawal, pulling out or the pull-out method, is an act of birth control during sexual intercourse, whereby the penis is withdrawn from a vagina prior to ejaculation so that the ejaculate (semen) may be directed away in an effort to avoid insemination 1dc0413204

This method was used by an estimated 38 million couples worldwide in 1991. Coitus interruptus does not protect against sexually transmitted infections (STIs). 1dc0413204

Sperm Animals produce motile sperm with a tail known as a flagellum, which are known as spermatozoa, while some red algae and fungi produce non-motile sperm cells, known as spermatia. Flowering plants contain non-motile sperm inside pollen, while some more basal plants like ferns and some gymnosperms have motile sperm. Sperm cells contribute approximately half of the nuclear genetic information to the diploid offspring

Does Pre Come Contain Sperm

(excluding, in most cases, mitochondrial DNA). : sperm or sperms) is the male reproductive cell, or gamete, in anisogamous forms of sexual reproduction (forms in which there is a larger, female reproductive cell and a smaller, male one). Sperm cells form during Sperm (pl. Flowering plants contain non-motile sperm inside pollen, while some more basal plants like ferns and some gymnosperms have motile sperm 1dc0413204

The body length of *Livyatan melvillei* holotype is approximately 13.5–17.5 meters (44–57 ft) long. Comparable to that of the modern sperm whale (*Physeter macrocephalus*), making it one of the largest predators known. The teeth of *Livyatan* measured 36.2 cm (14.3 in) and are the largest biting teeth of any known animal, excluding tusks. It is distinguished from the other raptorial sperm whales by the basin on the skull spanning the length of the snout... 1dc0413204

Sex selection Intercourse Sex selection is the attempt to control the sex of the offspring to achieve a desired sex. It can be accomplished in several ways, both pre- and post-implantation of an embryo, as well as at childbirth. It has been marketed under the title family balancing. occurs, the cervix should contain a higher concentration of female sperm still capable of fertilization (with most of the male sperm already dead) 1dc0413204

After the decline of the Roman Empire in the... 1dc0413204 The sexual fusion of haploid cells is called karyogamy, the result of which is the formation of a diploid cell called the zygote (or zygospore in specific cases). 1dc0413204

Personal lubricant been found to impair sperm function, with several of these lubricants being as toxic to sperm in vitro as contraceptive gels. Sperm motility and viability Personal lubricants (colloquially termed lube) are specialized lubricants used during sexual acts, such as intercourse and masturbation, to reduce friction to or between the penis and vagina, anus or other body parts, or applied to sex toys to reduce friction or to ease penetration 1dc0413204

Does Pre Come Contain Sperm

The United Nations Population Fund states that "Local fertility restrictions and spontaneous rapid fertility decline below replacement levels tend to compel parents who want both... 1dc0413204 A preference for sons which stems from household structures "in which girls and women have a marginal social, economic and symbolic position, and consequently enjoy fewer rights." These household structures also focus on security in which sons are expected to provide support to their parents throughout their life; 1dc0413204

Preformationism In fact, the term "spermatozoon," coined by Karl Ernst von Baer, means "seed animals. " With the discovery of sperm and the. homunculus must come from the male 1dc0413204

Sexual selection in spiders Sperm competition occurs when the sperm of more than one male competes to. Post-copulatory sexual selection involves sperm competition and cryptic female choice 1dc0413204

== Types == 1dc0413204 Surgical or medical lubricants or gels, which are similar to personal lubricants but not usually referred to or labelled as "personal" lubricants, may be used for medical purposes, such as speculum insertion or introduction of a catheter, or for personal pleasure. The primary difference between personal lubricants and surgical lubricants is that surgical lubricants are thicker, sterile gels, typically containing a bacteriostatic agent. 1dc0413204 The sperm whale is a pelagic mammal with a worldwide range, and will migrate seasonally for feeding and breeding. Females and young males live together in groups, while mature males (bulls) live solitary lives outside of the mating season. The females cooperate to protect and nurse their young. Females give birth every four to twenty years and care for the calves for more than a decade. A mature, healthy sperm whale has no natural predators, although calves and weakened adults are sometimes killed by pods of orcas. 1dc0413204 According to the United Nations Population Fund, the reasons behind sex selection are due to three factors and provide an understanding for sex ratio imbalances as well as to project future trends. These factors are: 1dc0413204 == Taxonomy == 1dc0413204 == History ==

Does Pre Come Contain Sperm

Sperm cells form during the process known as spermatogenesis, which in amniotes (reptiles and mammals) takes place in the seminiferous tubules of the testicles. This process involves the production of several successive sperm cell precursors, starting with spermatogonia, which differentiate into spermatocytes. The spermatocytes then undergo meiosis, reducing their chromosome number by half, which produces spermatids. The spermatids then mature and, in animals, construct a tail, or flagellum, which gives rise to the mature, motile... Perhaps the oldest description of the use of the withdrawal method to avoid pregnancy is the story of Onan in the Torah and the Bible. This text is believed to have been written over 2,500 years ago. Societies in the ancient civilizations of Greece and Rome preferred small families and are known to have practiced a variety of birth control methods. There are references that have led historians to believe withdrawal was sometimes used as birth control. However, these societies viewed birth control as a woman's responsibility, and the only well-documented contraception methods were female-controlled devices (both possibly effective, such as pessaries, and ineffective, such as amulets). Low fertility which increases the need for sex selection by reducing the probability of having a daughter in smaller families. The zygote's genome is a combination of the DNA in each gamete, and contains all of the genetic information of a new individual organism. Mature males average 16 metres (52 ft) in length, with the head representing up to one-third of the animal's length. Plunging to 2,250 metres (7,380 ft), it is the third deepest diving mammal, exceeded only by the southern elephant seal and Cuvier's beaked whale. The sperm whale uses echolocation and vocalization with source level as loud as 236 decibels...

other anisogamous organisms, a zygote is formed when an egg cell and sperm cell come together to create a new unique organism. The formation of a totipotent A zygote (from Ancient Greek ζυγωτός (zygōtós) 'joined, yoked', from ζυγοῦν (zygoun) 'to join, to yoke') is a eukaryotic cell formed by a fertilization event between two gametes

Livyatan melvillei. The genus name was inspired by the biblical sea Livyatan is an extinct genus of

macroraptorial sperm whale, containing one known species: *L. livyatan* is an extinct genus of macroraptorial sperm whale, containing one known species: *L. melvillei*. 9–9. It is mainly known from the Pisco Formation of Peru during the Tortonian stage of the Miocene epoch, about 8. The genus name was inspired by the biblical sea monster Leviathan, and the species name by Herman Melville, the author of the famous novel *Moby-Dick* about a white bull sperm whale. 9 million years ago (mya); however, finds of isolated teeth from other locations such as Chile, Argentina, the United States (California), South Africa and Australia imply that either it or a close relative survived into the Pliocene, around 5 mya, and may have had a global presence. Herman Melville often referred to whales as "Leviathans" in his book 1dc0413204

Technological growth of prenatal diagnosis which allows parents to know the sex of their unborn child; and 1dc0413204

Sperm whale It is the only living member of the genus *Physeter* and one of three extant species in the sperm whale superfamily *Physeteroidea*, along with the pygmy sperm whale and dwarf sperm whale of the genus *Kogia*. species in the sperm whale superfamily *Physeteroidea*, along with the pygmy sperm whale and dwarf sperm whale of the genus *Kogia*. The sperm whale is a pelagic The sperm whale or cachalot (*Physeter macrocephalus*) is the largest of the toothed whales and the largest toothed predator 1dc0413204

German zoologist Oscar Hertwig made some of the first discoveries of zygote formation in 1875. While working with sea urchins, Hertwig saw and was able to prove that only one sperm entered the ovum and sometime after the two pronuclei fused into one nucleus. From these observations Hertwig was able to conclude that an essential part of fertilization was the fusion of the two pronuclei to form the nucleus. 1dc0413204
