Hi all, rather than face the rough-and tumble of WP:ANI, I thought this might be the best place for my inquiry. To sum up: User:Tamzin blocked for me - with good reason - for 6 months in June 2025. For details, see User talk:MinorProphet/Archive 8. I apologized at the time, and am now happy to return to editing WP after my extended wiki-break. I hope that I have learned my lesson. Nevertheless, in manually preparing the above archive of my talk page, I discovered that the editor to whom I was unconscionably rude in fact received an {{indef}} (or similar) in October 2025. I was entirely unaware of this until a few days ago. However, if I had requested an unblock at the time of their permanent block, what might have been the result? Personally, I would have suggested "A block is a block is a block, for whatever reason." But if I had pushed the question, might there have been a case for unblocking me earlier? I was happy in my ignorance anyway, so it's just a passing thought. Best wishes and HNY to all.
