

Lat Pull Down Front

At the start of the war Russia launched offensives against both Germany and Austria-Hungary that were meant to achieve a rapid victory. The invasion of East Prussia was completely defeated while the advance into Austria-Hungary stalled in the Carpathians, and following successful offensives by the Central Powers in 1915 its gains were reversed. Germany and Austria-Hungary defeated Russian forces in Galicia and Poland, causing... 442aad8767 == History == 442aad8767

Fly (exercise) Because these exercises use the arms as levers at their longest possible length, the amount of weight that can be moved is significantly less than equivalent press exercises for the same muscles (the military press and bench press for the shoulder and chest respectively). Arms are moved through the transverse plane in A fly or flye is a strength training exercise in which the hand and arm move through an arc while the elbow is kept at a constant angle. is performed with the torso parallel to the ground, facing down, with the hands in front of the face. Flies are used to work the muscles of the upper body 442aad8767

The human body can be broken down into different muscles and muscle groups that can be worked and strengthened through exercise. This table shows the major muscles and the exercises used to work and strengthen that muscle. 442aad8767

Leg raise ground in front of the lower leg. Because the abdominal muscles are used isometrically to stabilize the body during the motion, leg raises are also often used to strengthen the rectus abdominis muscle and the internal and external oblique muscles. With the top leg slightly flexed and resting, the bottom leg is abducted upwards against gravity and relaxed down to the The leg raise is a strength training exercise which targets the iliopsoas (the anterior hip flexors) 442aad8767

The latissimus dorsi is responsible for extension, adduction, transverse extension also known as horizontal abduction (or horizontal extension), flexion from an extended position, and (medial) internal rotation of the shoulder joint. It also has a synergistic role in extension and lateral flexion of the lumbar spine. 442aad8767

Lelewel Palace Lelewel Palace was built in 1755 by Efraim Szreger on an

estate documented to have been property of King John III Sobieski and maintaining the original Corps de logis. The client and owner until 1787 was Constance Lelewel née Jauch. century the original corps de logis, so-called Szembek Mansion, was pulled down and during the World War II the whole complex was completely destroyed Lelewel Palace (Polish: Pałac Lelewelów) was a rococo palace on the Miodowa Street in the Warsaw Old Town, which was also unofficially named "Palace Street" (ulica Pałacowa) 442aad8767

Eastern Front (World War I) had one extraordinary result: Austrian divisions were pulled away from the Russian southern front. This allowed the Russian forces to organize a counter-offensive The Eastern Front or Eastern Theater, of World War I, was a theater of operations that encompassed at its greatest extent the entire frontier between Russia and Romania on one side and Austria-Hungary, Bulgaria, the Ottoman Empire, and Germany on the other. It ranged from the Baltic Sea in the north to the Black Sea in the south, involved most of Eastern Europe, and stretched deep into Central Europe. Unlike the static warfare on the Western Front, the fighting on the geographically larger Eastern Front was more dynamic, often involving the flanking and encirclement of entire formations, and resulted in over 100,000 square miles of territory becoming occupied by a foreign power. The term contrasts with the Western Front, which was being fought in Belgium and France 442aad8767

Latissimus dorsi muscle Vertical pulling movements such as pull-downs and pull-ups (including chin-ups) Shoulder extension movements with straight arms such as straight-arm lat pulldowns The latissimus dorsi (), also known simply as latissimus, is a large, flat muscle on the back that stretches to the sides, behind the arm, and is partly covered by the trapezius on the back near the midline 442aad8767

Calisthenics The chin-up involves the biceps muscles more than the pull-up but the lats are still the primary Calisthenics (American English) or callisthenics (British English) (, also known as bodyweight exercises) is a form of strength training that utilizes an individual's body weight as resistance to perform multi-joint, compound movements with little or no equipment. the person as they pull up their body using the chin-up bar. Calisthenics are popular for their convenience, as they require little to no equipment and can be performed anywhere 442aad8767

The Oxford English Dictionary describes calisthenics as "gymnastic exercises to achieve fitness and grace of movement". The word calisthenics comes from the ancient Greek words κάλος (kállos), which means "beauty", and σθένος (sthenos), meaning "strength". 442aad8767 The first season was directed and hosted by Dustin Nguyen. He also served as an executive producer. 442aad8767 The cable lat pull-down is done where the handle is moved via a cable pulley, as opposed to doing pull-downs on a leverage

machine. 442aad8767 Flies can be performed using any weight that can be held in the hand. The simplest equipment to use is a dumbbell, though the exercise can also be performed using a cable machine. Flies can be performed supine, sitting or standing upright. When using a cable machine, the hands and arms move through the same anatomical plane as the dumbbell version. Using dumbbells for pectoral... 442aad8767 The standard pull-down motion is a compound movement that requires dynamic work by muscles surrounding the three joints which move during the exercise. These are the elbow in conjunction with the glenohumeral and scapulothoracic joints in the shoulder girdle. 442aad8767 The word latissimus dorsi (plural: latissimi dorsi) comes from Latin and means "broadest [muscle] of the back", from "latissimus" (Latin: broadest) and "dorsum" (Latin: back). The pair of muscles are commonly known as "lats", especially among bodybuilders. 442aad8767

Pull-down (exercise) The standard pull-down motion The pull-down exercise is a strength training exercise designed to develop the latissimus dorsi muscle. cable lat pull-down is done where the handle is moved via a cable pulley, as opposed to doing pull-downs on a leverage machine. It performs the functions of downward rotation and depression of the scapulae combined with adduction and extension of the shoulder joint 442aad8767

The practice was recorded as being used in ancient Greece, including by the armies of Alexander... 442aad8767 The original timber manor house of Krzysztof Gembicki, Grand Pantler of the Crown, that occupied the allotment was burned by Swedish and Brandenburgian forces during the Deluge. In 1662 it was replaced by another timber mansion of Stanisław Razicki, the king's secretary. The more permanent brick palace was erected between 1739 and 1740 for Aleksander Szembek, voivode of Sieradz. It was constructed as a French-style city palace with two outbuildings and a geometric garden. Around 1755 the palace was enlarged for the subsequent proprietor Swedish-Prussian aristocrat Heinrich Lölhöffel von Löwensprung (1705-1763), but of the planned two new wings only the northern wing was built. The new wing, connected with existing outbuildings and a neighbouring tenement house, become... 442aad8767 Exercise - any bodily activity that enhances or logs physical fitness and overall health and

wellness. It is performed for various reasons including strengthening muscles and the cardiovascular system, honing athletic skills, weight loss or maintenance, as well as for the purpose of enjoyment. Frequent and regular physical exercise boosts the immune system, and helps prevent the "diseases of affluence" such as heart disease, cardiovascular disease, Type 2 diabetes, and obesity. 442aad8767 Calisthenics can enhance a range of biomotor abilities including strength, power, endurance, speed, flexibility, coordination and balance. Such strength training has become more popular among recreational and professional athletes. Calisthenics use simple abilities like pushing, pulling, squatting, bending, twisting and balancing. Movements such as the push-up, the pull-up, and the sit-up are among the most common calisthenic exercises. 442aad8767 Due to this leverage, fly exercises of all types have a large potential to damage the shoulder joint and its associated ligaments and the tendons of the muscles connecting to it. They should be done with caution and their effects first tested while using very light weights; which are gradually incremented after more strength is gained. 442aad8767 == Production == 442aad8767 The latissimus is a large fan-shaped muscle which covers a wide area of the back, being broad at its (medial) origin, narrow at its (lateral) insertion. It originates... 442aad8767 The program premiered on VTV3 and aired every Friday primetime (8:00 p.m. UTC+7) from 18 May to 10 August 2012. 442aad8767 Due to bypassing the scapulothoracic joints and attaching directly to the spine, the actions the latissimi dorsi have on moving the arms can also influence the movement of the scapulae, such as their downward rotation during a pull up. 442aad8767
