Benzodiazepines are depressants that enhance the effect of the neurotransmitter gamma-aminobutyric acid (GABA) at the GABAA receptor, resulting in sedative, hypnotic (sleep-inducing), anxiolytic (anti-anxiety), anticonvulsant, and muscle relaxant properties. High doses of many shorter-acting benzodiazepines may also cause anterograde amnesia and dissociation. These properties make benzodiazepines useful in treating severe anxiety, panic... d4d6faed07 Name, age, country of citizenship at birth, subsequent country of citizenship (if applicable), reason for notability, cause of death (if known), and reference. d4d6faed07

By 1977, benzodiazepines were the most prescribed medications globally. The first benzodiazepine, chlordiazepoxide (Librium), was discovered accidentally by Leo Sternbach in 1955, and was made available in 1960 by Hoffmann-La Roche, which followed up by developing diazepam (Valium) in 1963. “Síndrome das pernas inquietas: diagnóstico e tratamento. This change reflected a shift toward a unified understanding of autism-related conditions rather than a judgment about individuals previously diagnosed with AS. Despite its removal from contemporary medical classification systems, many people continued to identify with the term Asperger's because of its long-standing use, personal relevance, and the way it shaped their diagnostic history and community identity. However, self-identification using the Asperger label became much rarer (going from 51 percent in 2018 to 19 percent in 2022, according to one set of polls) following the publication of the 2018 Edith Sheffer book Asperger's Children. List of autoimmune diseases Lastly, the prevalence rate, specifically in the United States, is included to give a sense of how common each disorder is within the population. “Síndrome de Sjögren”; Brito-Zerón, Pilar; Retamozo, Soledad; Ramos-Casals, Manuel (2023). This classification is based on the current scientific consensus and reflects the level of evidence supporting the autoimmune nature of the disorder. These conditions, where the body's immune system mistakenly attacks its own cells, affect a range of organs and systems within the body. Each disorder is listed with the primary organ or body part that it affects and the associated autoantibodies that are typically found in people diagnosed with the condition. 160 (4). Elsevier BV: 163–171 This article provides a list of autoimmune diseases. Ogden syndrome Huff, Lynne M. Jeffrey J. Stevens, Tao Jiang, Christa Schank Ogden syndrome, also known as N-terminal acetyltransferase deficiency (NATD), is an X-linked disorder of infancy comprising a distinct combination of distinctive craniofacial features producing an aged appearance, growth failure, hypotonia, global developmental delays, cryptorchidism, and spontaneous cardiac arrhythmias. This same mutation was identified in a second unrelated family, with three affected boys in two generations. A mutation was identified as a c. Carey, John M. Evan Johnson, Barry Moore, Chad D. This severe genetic disorder has provisionally been named Ogden syndrome, as this is the city where the first affected family resides. The first family was identified in Ogden, Utah, with five affected boys in two generations of family members. Opitz, Cathy A. 109T>C (p. Ser37Pro) variant in NAA10, a gene encoding the

The overall incidence of ENS is unknown due to the small body of epidemiological study and the lack of a dedicated International Classification of Diseases (ICD-10) code, which would allow incidence reporting of the syndrome. Many cases of ENS may be unrecognized, underdiagnosed, and unreported. Montell Cozart, a quarterback in the Canadian Football League and USFL was diagnosed following the 2023 USFL season. The accident began with failures in the non-nuclear secondary system, followed by a stuck-open pilot-operated relief valve (PORV) in the primary system, which allowed large amounts of water to escape from the pressurized isolated coolant loop. The mechanical failures were compounded by the initial failure of plant operators to recognize the situation...
