Serious and relatively common causes include acute coronary syndrome such as a heart attack (31%), pulmonary embolism (2%), pneumothorax, pericarditis (4%), aortic dissection (1%) and esophageal rupture. Other common causes include gastroesophageal reflux disease (30%), muscle or skeletal pain (28%), pneumonia (2%), shingles (0.5%), pleuritis, traumatic and anxiety disorders. Determining the cause of chest pain is based on a person's medical history, a physical exam and other medical tests. About 3% of heart attacks, however, are initially missed. Lewis states that his writing is "not primarily arguing the truth of Christianity but describing its origin - a task ... necessary if we are to put the problem of pain in its right setting". He begins by addressing the flaws in common arguments against the belief in a just, loving, and all-powerful God such as: "If God were good, He would make His creatures perfectly happy, and if He were almighty He would be able to do what he wished. But the creatures are not happy. Therefore God lacks either goodness, or power, or both." Topics include human suffering and sinfulness, animal suffering, and the problem of hell, and seeks to reconcile these with an omnipotent force beyond ourselves. The song received acclaim from music critics, many of whom praised Sting's lyrics and cited the song as a highlight from Synchronicity. It reached No. 3 in the US Billboard Hot 100 chart in October 1983, and No. 1 on the Billboard Top Tracks chart for five weeks in August 1983. In the United Kingdom, it reached No. 17 in January 1984, becoming the band's last UK Top 20 hit.

Sensations are reported most frequently following the amputation of a limb, but may also occur following the removal of a breast, tongue, or internal organ. Phantom eye syndrome can occur after eye loss. The pain sensation and its duration and frequency varies from individual to individual. In most episodes of low back pain a specific underlying cause is not identified or even looked for: the pain is believed to be due to mechanical problems such as muscle or joint strain. If the pain does not go away with conservative treatment or if it is accompanied by "red flag" symptoms such as unexplained weight loss, fever, or significant problems with feeling or movement, further testing may be needed to look for a serious underlying problem. In most cases, imaging tools such as CT scans are not useful or recommended for low back pain that lasts less than 6 weeks (with no red flags) and carry their own risks. Some low back pain is caused by damaged intervertebral...
