

Sharp Pain Right Side Belly

The hip joint, scientifically referred to as the acetabulofemoral joint (art. coxae), is the ball-and-socket joint between the pelvic acetabulum and the femoral head. Its primary function is to support the weight of the torso in both static (e.g. standing) and dynamic (e.g. walking or running) postures. The hip joints have very important roles in retaining balance, and for maintaining the pelvic inclination angle. 163cf7695d Various types of hernias can occur, most commonly involving the abdomen, and specifically the groin. Groin hernias are most commonly inguinal hernias but may also be femoral hernias. Other types of hernias include hiatus, incisional, and umbilical hernias. Symptoms are present in about 66% of people with groin hernias. This may include pain or discomfort in the lower abdomen, especially with coughing, exercise, or urinating or defecating. Often, it gets worse throughout the day and improves when lying down. A bulge may appear at the site of hernia, that becomes larger when bending down. 163cf7695d == Capitoline Centaurs == 163cf7695d Choking is the fourth leading cause of unintentional injury death in the United States. Many episodes go unreported because they are brief and resolve without needing medical attention. Of the reported events, 80% occur in people under 15 years of age, and 20% occur in people older than 15 years of age. Worldwide, choking on a foreign object resulted in 162,000 deaths (2.5 per... 163cf7695d == Structure == 163cf7695d The practice dates back as far as the Heian period (794 to 1185), when it was done by samurai who were about to fall into the hands of their enemies and likely be tortured. By the time of the Meiji era (1868 to 1912), it had taken on an association with honor, and had also become a capital punishment for samurai who had committed serious offenses, sometimes involving a ritual imitation of cutting oneself (with a wooden dirk). The ceremonial disembowelment, which is usually part of a more elaborate ritual and performed in front of spectators, consists of plunging a short blade, traditionally a tantō, into the belly and drawing the blade from left to right, slicing the belly open. If the cut is deep enough, it can sever the abdominal aorta, causing death by rapid... 163cf7695d == Structure == 163cf7695d Other signs at the time of injury may include ecchymosis, swelling, and/or a sharp pain accompanied... 163cf7695d Communication and sociability can vary greatly among individual cats. In a family with many cats, the interactions can change depending on which individuals are present and how restricted the territory and resources are. One or more individuals may become aggressive: fighting may occur with the attack, resulting in scratches and deep bite wounds. 163cf7695d == Western culture == 163cf7695d

Human leg The major bones are the femur (thigh bone), tibia (shinbone), and adjacent fibula. There are thirty bones in each leg. three-sided belly of the tibialis anterior extends down below the superior and inferior extensor retinacula to its insertion on the plantar side of the The human leg is the lower limb of the human body, including the thigh, knee, lower leg, ankle, foot, or sometimes even the hip or buttock region 163cf7695d

Seppuku It was originally reserved for samurai in their code of honor, but was also practiced by other Japanese people during the Shōwa era (particularly officers near the end of World War II) to restore honor for themselves or for their families. If the cut is deep enough, it can sever Seppuku (切腹, lit. short blade, traditionally a tantō, into the belly and drawing the blade from left to right, slicing the belly open. 'cutting [the] belly'), also called harakiri (腹切り, lit. 'abdomen/belly cutting', a native Japanese kun reading), is a form of Japanese ritualistic suicide by disembowelment 163cf7695d

Pain of the hip may be the result of numerous causes, including nervous, osteoarthritic, infectious, traumatic, and genetic. 163cf7695d The hip region is located lateral and anterior to the gluteal region, inferior to the iliac crest, and lateral to the obturator foramen, with muscle tendons and soft tissues overlying the greater trochanter of the femur. In adults, the three pelvic bones (ilium, ischium and pubis) have fused into one hip bone, which forms the superomedial/deep wall of the hip region. 163cf7695d The part of the leg between the hip and the knee is called the thigh. The part between the knee and the ankle is called the lower leg, shank, crus, or in anatomy simply the leg. The lower leg includes the shin in the front and the calf at the back. 163cf7695d Legs are used for standing, many forms of human movement, recreation such as dancing, and constitute a significant portion of a person's mass. Evolution has led to the human leg's development into a mechanism specifically adapted for efficient bipedal gait. While the capacity to walk upright is not unique to humans, other primates can only achieve this for short periods and at a great expenditure of energy. In humans, female legs generally have greater hip anteversion and tibiofemoral angles, while male legs have longer femur and tibial lengths. 163cf7695d When a tendon of the biceps brachii ruptures, the muscle belly retracts, meaning that it goes from a lengthened position under tension at two attachments to a shortened position with a single attachment. This shortened position forms a bulge which is referred to as "Popeye's deformity," due to its similarity in appearance to the cartoon character Popeye. 163cf7695d

Cat behavior When cats are in pain or feeling sick, they will hold their ears low, rotated to the side. It varies among individuals, colonies, and breeds. danger or fear is over. Cats also show feelings of playfulness Cat behavior encompasses the actions and reactions displayed by a cat in response to various stimuli and events. Cat behavior includes body language, elimination habits, aggression, play, communication, hunting, grooming, urine marking, and face rubbing 163cf7695d

Hernia The term is also used for the normal development of the intestinal tract, referring to the retraction of the intestine from the extra-embryonal navel coelom into the abdomen in the healthy embryo at about 71/2 weeks. : hernias or herniae, from Latin, meaning 'rupture') is the abnormal exit of tissue or an organ, such as the bowel, through the wall of the cavity in which it normally resides. larger when bending down. Groin hernias occur more often on the right than left side. The main concern is bowel strangulation, where the blood supply A hernia (pl 163cf7695d

Trigeminal nerve The two basic types of sensation are touch-position and pain-temperature. The ophthalmic and maxillary nerves are purely sensory, whereas the mandibular nerve supplies motor as well as sensory (or "cutaneous") functions. Its name (trigeminal, from Latin tri- 'three' and -geminus 'twin') derives from each of the two nerves (one on each side of the pons) having three major branches: the ophthalmic nerve (V1), the maxillary nerve (V2), and the mandibular nerve (V3). Touch-position input comes to attention immediately, but pain-temperature In neuroanatomy, the trigeminal nerve (lit. opposite side. Adding to the complexity of this nerve is that autonomic nerve fibers as well as special sensory fibers (taste) are contained within it. triplet nerve), also known as the fifth cranial nerve, cranial nerve V, or simply CN V, is a cranial nerve responsible for sensation in the face and motor functions such as biting and chewing; it is the most complex of the cranial nerves 163cf7695d

The motor division of the trigeminal nerve derives from the basal plate of the embryonic pons, and the sensory division originates in the cranial neural crest. Sensory information from the face and body is processed by parallel pathways in the central nervous system. 163cf7695d

Choking making sharp thrusts in an inwards-an-upwards direction. It is possible to place a fist or both fists between the chosen border and the belly, to increase Choking, also known as foreign body airway obstruction (FBAO), is a phenomenon that occurs when breathing is impeded by a blockage inside of the respiratory tract. Although oxygen stored in the blood and lungs can keep a person alive for several minutes after breathing stops, choking often leads to death. An obstruction that prevents oxygen from entering the lungs results in oxygen deprivation 163cf7695d

Around 4,500 to 5,000 choking-related deaths occur in the United States every year. Deaths from choking most often occur in the very young (children under three years old) and in the elderly (adults over 75 years). Foods that can adapt their shape to that of the pharynx (such as bananas, marshmallows, or gelatinous candies) are more dangerous. Various forms of specific first aid are used to address and resolve choking. 163cf7695d

Furietti Centaurs The amorini are missing that once rode the backs of these centaurs, which are the outstanding examples of a group of sculptures varying the motif. One is a mature, bearded centaur, with a pained expression, and the other is a young smiling centaur with his arm raised. original right arm of the centaur is pulled tautly back showing that he has his hands bound tightly behind his back, and "grimaces in pain and sorrow The Furietti Centaurs (known as the Old Centaur and Young Centaur, or Older Centaur and Younger Centaur, when being treated separately) are a pair of Hellenistic or Roman statues in grey-black marble from Laconia (Greece) sculptures of centaurs based on Hellenistic models 163cf7695d

Groin hernias occur more often on the right than left side. The main concern is bowel strangulation, where the blood supply to part of the bowel is blocked. This usually produces severe pain and tenderness... 163cf7695d

Cultural views on the midriff and navel the right side is considered auspicious and is expected to lead a comfortable life. Husain once commented, "The belly button Cultural views on the midriff and navel vary significantly. F. The views, customs and fashions relating to the midriff and navel change from time to time, and such exposure has become more widely acceptable, as reflected in the designs of clothing. Famous Indian painter M. In some cultures the navel is seen as sexually and culturally significant, and its exposure has been subject to a variety of cultural norms and taboos, based on concepts of modesty 163cf7695d

== Structure == 163cf7695d The sculptures were found together at Hadrian's Villa in Tivoli by Monsignor Giuseppe Alessandro Furietti in December 1736; they were the outstanding pieces of his collection of antiquities, which he refused to give to Pope Benedict XIV— at the cost of a cardinal's hat. Furietti was eventually created cardinal priest, by Pope Clement XIII in the consistory of 24 September 1759. After the cardinal's death, his heirs sold the centaurs and the Furietti... 163cf7695d The strongly contrasted moods were intended to remind the Roman viewer of the soul troubled in pain with love or uplifted in joy, themes of Plato's Phaedrus and Hellenistic poetry. 163cf7695d

Biceps tendon rupture injury may include ecchymosis, swelling, and/or a sharp pain accompanied by an audible popping sound. Provocative physical exam maneuvers to assess for a rupture include Ludington's test, Hook test, and the Ruland biceps squeeze test. The pain may persist for prolonged periods of time depending A biceps tendon rupture or bicep tear is a complete or partial rupture of a tendon of the biceps brachii muscle. Treatment and prognosis are highly dependent on the site of the injury described in further detail below. The characteristic finding of a biceps tendon rupture is the Popeye sign. Patients often report an audible pop at the time of injury as well as pain, bruising, and swelling. It can affect any of the three biceps brachii tendons - the proximal tendon of the short head of the muscle belly, the proximal tendon of the long head of the muscle belly, or the distal tendon 163cf7695d

Hip : coxae) in medical terminology, refers to either an anatomical region or a joint on the outer (lateral) side of the pelvis. in retaining balance, and for maintaining the pelvic inclination angle. Pain of the hip may be the result of numerous causes, including nervous, osteoarthritic In vertebrate anatomy, the hip, or coxa (pl 163cf7695d
