

Term And Full Term Pregnancy

Others—in the minority—are of the view that abdominal pregnancy should be defined by a placenta implanted into the peritoneum. 1436aca093

Abdominal pregnancy abdominal pregnancy is a rare type of ectopic pregnancy where the embryo or fetus is growing and developing outside the uterus, in the abdomen, and not in An abdominal pregnancy is a rare type of ectopic pregnancy where the embryo or fetus is growing and developing outside the uterus, in the abdomen, and not in a fallopian tube (usual location), an ovary, or the broad ligament 1436aca093

== Complications == 1436aca093 The controversy is not primarily a scientific issue, since knowledge of human reproduction and development has become very refined; the linguistic questions remain debated for other reasons. The issue poses larger social, legal, medical, religious, philosophical, and political ramifications because some people, such as Concerned Women for America, identify the beginning of a pregnancy as the beginning of an individual human being's life. Many of these arguments are related to the anti-abortion movement. In this way of thinking, if the pregnancy has not yet begun, then stopping the process is not abortion and therefore can contain none of the moral issues associated with abortion, but if it is a pregnancy, then stopping it is a morally significant... 1436aca093 Conception usually occurs following vaginal intercourse, but can also occur through assisted reproductive technology procedures. A pregnancy may end in a live birth, a miscarriage, an induced abortion, or a stillbirth. Childbirth typically occurs around 40 weeks from the start of the last menstrual period (LMP), a span known as the gestational age; this is just over nine months. Counting by fertilization age, the length is about 38 weeks. Implantation occurs on average 8–9 days after fertilization. An embryo is the term for the developing offspring during the first seven weeks following implantation (i.e. ten weeks' gestational age), after which the term fetus is used until the birth of a baby. 1436aca093

Complications of pregnancy Complications that occur primarily during childbirth are termed obstetric labor complications, and problems that occur primarily after childbirth are termed puerperal disorders. Complications of pregnancy are health problems that are related to or arise during pregnancy. While some complications improve or are fully resolved after pregnancy, some may lead to lasting effects, morbidity, or in the most severe cases, maternal or fetal mortality. Complications that occur primarily during childbirth are termed obstetric Complications of pregnancy are health problems that are related to or arise during pregnancy 1436aca093

In the United States, the mortality rate for legal abortions overall is less than 1 in 100,000 procedures performed. The rate of mortality and morbidity increases with the gestational age of the fetus, so patients who have decided to have an abortion are strongly encouraged to get it early. Still, later abortion is not associated with any greater net negative physical or mental health outcomes... 1436aca093

Late termination of pregnancy As of 2015, in the United States, more than 90% of abortions occur before the 13th week, 1. While little data exists on abortions done after 26 weeks, one study from 1992 estimated the rate at 0. 3% take place after the 21st week, and less than 1% occur after 24 weeks. 02%. In this context, late is not precisely defined, and different medical publications use varying gestational age thresholds. Late termination of pregnancy, also referred to as late-term abortion in political contexts, describes the termination of pregnancy by inducing labor during Late termination of pregnancy, also referred to as late-term abortion in political contexts, describes the termination of pregnancy by inducing labor during a late stage of gestation 1436aca093

Postterm pregnancy Postmature births carry risks for both the mother and the baby, including fetal malnutrition, meconium aspiration syndrome, and stillbirths. Postterm pregnancy is a reason to induce labor. After the 42nd week of gestation, the placenta, which supplies the baby with nutrients and oxygen from the mother, starts aging and will eventually fail. Postterm pregnancy is a pregnancy continuing past the 42nd week of gestation, two weeks beyond the typical 40-week duration of pregnancy. Postmature births Postterm pregnancy is a pregnancy continuing past the 42nd week of gestation, two weeks beyond the typical 40-week duration of pregnancy 1436aca093

In 2016, complications of pregnancy, childbirth, and the puerperium resulted in 230,600 deaths globally, down from 377,000 deaths in 1990. The most... 1436aca093 Unicornuate uterus with rudimentary horn is a type of congenital uterine anomaly that arises when one of the Müllerian ducts fails to develop fully, resulting in a small rudimentary horn on one side of the uterus. Different terms have been used in the literature to describe the rudimentary horn, such as uterus bicornis with accessory horn, uterus bicornis unicollis with rudimentary horn, uterus bicornis unicollis with atretic horn, hernia uterus inguinale, and Robert's uterus. 1436aca093

Ectopic pregnancy This complication has also been referred to as an extrauterine pregnancy (a. With very rare exceptions, the fetus is unable to survive. "Full-term abdominal pregnancy: a case report and review of the literature". EUP). Signs and symptoms classically include abdominal pain and vaginal bleeding, but fewer than 50 percent of affected women have both of these symptoms. k. a. Gynecologic and Obstetric Investigation. Pain may also spread to the shoulder if bleeding into the abdomen has occurred. Zhang J, Li F, Sheng Q (2008). Severe bleeding may result in a fast heart rate, fainting, or shock. 65 (2): Ectopic pregnancy is a complication of pregnancy in which the embryo attaches outside the uterus. The pain may be described as sharp, dull, or crampy 1436aca093

The management of labor and delivery may vary depending on the gestational age. It is common to encounter the following terms when describing different time periods of pregnancy. 1436aca093 Symptoms may include abdominal pain or vaginal bleeding during pregnancy. As this is nonspecific in areas where ultrasound is not available the diagnosis was often only discovered during surgery to investigate the abnormal symptoms. They are typically diagnosed later in the developing world than the developed. In about half of cases from a center in the developing

world the diagnosis was initially missed. 1436aca093 Common complications of pregnancy include anemia, gestational diabetes, infections, gestational hypertension, and pre-eclampsia. Presence of these types of complications can have implications on monitoring lab work, imaging, and medical management during pregnancy. 1436aca093 It is a dangerous condition as there can be bleeding into the abdomen that results in low blood pressure and can be fatal. Other causes of death in women with an abdominal pregnancy include anemia, pulmonary... 1436aca093 Overall, ectopic pregnancies annually affect less than 2% of pregnancies worldwide. Risk factors for ectopic pregnancy include pelvic inflammatory disease, often due to chlamydia infection; tobacco smoking; endometriosis; prior tubal surgery; a history of infertility; and the use of assisted reproductive technology. Those who have previously had an ectopic pregnancy are at much higher risk of having another one. Most ectopic pregnancies (90%) occur in the fallopian tube, which are known as tubal pregnancies, but implantation can also occur on the cervix, ovaries, caesarean scar, or within the abdomen... 1436aca093

Drugs in pregnancy Of those who bear children, recreational drug use can have serious consequences to the health of not only the mother, but also the fetus as many medications can cross the placenta and reach the fetus. Drugs, including medications and recreational drugs, may have effects during pregnancy on the pregnant woman and fetus that vary from the effects of the Drugs, including medications and recreational drugs, may have effects during pregnancy on the pregnant woman and fetus that vary from the effects of the drug on people who are not pregnant. The Food and Drug Administration (FDA) in the United States reports that there are six million pregnancies with at least 50% of the women taking at least one medication. In addition a reported 5–10% of women of childbearing age use alcohol or other addictive substances. Some of the consequences on the babies include physical and mental abnormalities, higher risk of stillbirth, neonatal abstinence syndrome (NAS), sudden infant death syndrome (SIDS), low birthweight, and others 1436aca093

Reasons for late terminations of pregnancy include cases where a pregnant woman's health is at risk, when birth defects, such as lethal fetal abnormalities, have been detected, or when barriers to receiving abortion cause delays. 1436aca093

Male pregnancy In nearly all animal species that give live birth, offspring are carried by the female until birth, but in fish of the family Syngnathidae (pipefish, seahorses and the leafy seadragon), males perform that function. Male pregnancy is the incubation of one or more embryos or fetuses by organisms of the male sex in some species. Most species that reproduce by sexual reproduction are heterogamous—females producing larger gametes (ova) and males producing smaller gametes (sperm). Most species that reproduce by sexual Male pregnancy is the incubation of one or more embryos or fetuses by organisms of the male sex in some species 1436aca093

Rudimentary horn pregnancy While there have been cases of successful live births, the prognosis for pregnancy in the rudimentary Pregnancy in a rudimentary horn of the uterus is a very rare type of ectopic pregnancy. fetal death, and occasionally, full-term gestation. This type of pregnancy can be life-threatening, as the rudimentary horn is not meant to sustain a pregnancy and is at risk of rupturing 1436aca093

== In animals == 1436aca093 Because tubal, ovarian and broad ligament pregnancies are as difficult to diagnose and treat as abdominal pregnancies, their exclusion from the most common definition of abdominal pregnancy has been debated. 1436aca093 Signs and symptoms of early pregnancy may include missed periods, tender breasts, morning sickness (nausea and vomiting), hunger, implantation bleeding, and frequent urination. Pregnancy may be confirmed with a pregnancy test. Methods of contraception are used to avoid pregnancy. 1436aca093

Beginning of pregnancy controversy Controversy over the beginning of pregnancy occurs in different contexts, particularly as it is discussed within the debate of abortion in the United Controversy over the beginning of pregnancy occurs in different contexts, particularly as it is discussed within the debate of abortion in the United States. Because an abortion is defined as ending an established pregnancy, rather than as destroying a fertilized egg, depending on when pregnancy is considered to begin, some methods of birth control as well as some methods of infertility treatment might be classified as causing abortions 1436aca093

This condition is considered a medical emergency, as rupture of the rudimentary horn can occur in the late first or second trimester of pregnancy (between 10 and 15 weeks of gestation), leading to massive bleeding and threatening the patient's life. Pregnancy in a rudimentary horn is typically associated with several complications, including intrauterine growth restriction, low amniotic fluid levels, preterm birth, fetal death, and occasionally, full-term gestation. While... 1436aca093 Severe complications of pregnancy, childbirth, and the puerperium are present in 1.6% of mothers in the US, and in 1.5% of mothers in Canada. In the immediate postpartum period (puerperium), 87% to 94% of women report at least one health problem. Long-term health problems (persisting after six months postpartum) are reported by 31% of women. 1436aca093 == Definitions == 1436aca093 Drugs taken in pregnancy including over-the counter-medications, prescription medications, nutritional supplements, recreational drugs, and illicit drugs may cause harm to the mother or the unborn child. Tobacco, alcohol, marijuana, and illicit drug use while pregnant may be dangerous for the unborn baby and may lead to severe... 1436aca093 == Signs and symptoms == 1436aca093

Pregnancy A multiple pregnancy involves more than one offspring, such as with twins. bleeding, and frequent urination. Pregnancy is divided Pregnancy is the time during which one or more offspring gestates inside a woman's uterus. Methods of contraception are used to avoid pregnancy. Pregnancy may be confirmed with a pregnancy test 1436aca093
