A hip fracture is usually a femoral neck fracture. Such fractures most often occur as a result of a fall. (Femoral head fractures are a rare kind of hip fracture that may also be the result of a fall but are more commonly caused by more violent incidents such as traffic accidents.) Risk factors include osteoporosis, taking many medications, alcohol use, and metastatic cancer. Diagnosis is

generally by X-rays. Magnetic resonance imaging, a CT scan, or a bone scan may occasionally be required to make the diagnosis. Possible causes include previous joint injury, abnormal joint or limb development, and inherited factors. Risk is greater in those who are overweight, have legs of different lengths, or have jobs that result in high levels of joint stress. Osteoarthritis is believed to be caused by mechanical stress on the...

A number of bondage positions and methods are used in rope bondage and other BDSM activities. Ropes are a common element of these positions, although straps, webbing, chains, hooks, manacles, spreader bars, collars, common furniture, purpose-built frames, various gags and monogloves may also be used. The ties and frictions often are variants of Japanese bondage, shibari and kinbaku from where they derived.

Pelvic girdle pain (PRPGP) is commonly used to describe symptoms occurring during pregnancy, while similar symptoms persisting after delivery are referred to as Pelvic girdle pain (PGP) is a musculoskeletal condition characterized by pain arising from one or more joints of the pelvic girdle, most commonly the pubic symphysis and sacroiliac joints. The condition has been recognized in medical literature since antiquity, having been mentioned by Hippocrates and later described in detail by Snelling in the nineteenth century. It is frequently associated with pregnancy and the postpartum period, and may range from mild discomfort to severe functional limitation. PGP can cause pain, instability, and reduced mobility, particularly during weight-bearing activities 71661e6020

Pacemaker Modern pacemakers usually have multiple functions. Each pulse causes the targeted chamber(s) to contract and pump blood, this regulating the function of the electrical conduction system of the heart. The most basic form A pacemaker, also known as an artificial cardiac pacemaker, is an implanted medical device that

== Whole body ties == 71661e6020 The affection appears to consist of relaxation of the pelvic articulations, becoming apparent suddenly after parturition or gradually during pregnancy and permitting a degree of mobility of the pelvic bones which effectively hinders locomotion and gives rise to the most peculiar and alarming sensations. 71661e6020 The primary purpose of a pacemaker is to maintain an even heart rate, either because the heart's natural cardiac pacemaker provides an inadequate or irregular heartbeat, or because there is a block in the heart's electrical conduction system. Modern pacemakers are externally programmable and allow a cardiologist to select the optimal pacing modes for individual patients. Most pacemakers are on demand, in which the stimulation of the heart is based on the dynamic demand of the circulatory system. Others send out a fixed rate of impulses. 71661e6020
