

Sitting On The Toilet

Toilets in Japan flush toilets and urinals became common. The traditional Japanese-style (和式, washiki) toilet is the squat toilet. A squat toilet differs from a sitting toilet

== Accidental injuries == Sitting ==
Squat toilets are regarded as traditional by many. In 1976, squatting toilets were said to be used by the majority of the world's population...

Defecation postures People use the squatting postures when using squat toilets or when defecating in the open in the absence of toilets. People use the squatting postures when using squat toilets or when defecating in the open in the absence of toilets. The sitting posture on the other hand is used in toilets that have a pedestal or "throne", where users generally lean forward or sit at 90 degrees to a toilet seat. The sitting posture on the Humans mostly use one of two types of defecation postures to defecate: squatting and sitting.

Toilet seat A toilet seat consists of the seat itself, which may be contoured for the user to sit on, and the lid, which covers the toilet when it is not in use – the lid may be absent in some cases, particularly in public restrooms. toilet seat is a hinged unit consisting of a round or oval open seat, and usually a lid, which is bolted onto the bowl of a toilet used in a sitting position A toilet seat is a hinged unit consisting of a round or oval open seat, and usually a lid, which is bolted onto the bowl of a toilet used in a sitting position (as opposed to a squat toilet). The seat can be either for a flush toilet or a dry toilet

The technology used for modern toilets varies. Toilets are commonly made of ceramic (porcelain), concrete, plastic, or wood. Newer toilet technologies include dual flushing, low flushing, toilet seat warming, self-cleaning, female...

Flush toilet A flush toilet (also known as a flushing toilet, water closet (WC); see also toilet names) is a toilet that disposes of human waste (i. e. , urine and feces) bd55e961b4

Squat toilet This means that the posture for defecation and urination is to place one foot on each side of the toilet drain or hole and to squat over it. The term "squat" refers only to the expected defecation posture and not any other aspects of toilet technology, such as whether it is water flushed or not. This means that the posture for defecation and urination is to A squat toilet (or squatting toilet) is a toilet used by squatting, rather than sitting. There are several types of squat toilets, but they all consist essentially of a toilet pan or bowl at floor level. A squat toilet may use a water seal and therefore be a flush toilet, or it can be without a water seal and therefore be a dry toilet. Such a toilet pan is also called a "squatting pan". A squat toilet (or squatting toilet) is a toilet used by squatting, rather than sitting bd55e961b4

Dual flush toilet The purpose. dual flush toilet is a variation of the flush toilet that uses two buttons or a handle mechanism to flush two different quantities of water bd55e961b4

Infants and toddlers have fallen headfirst into toilet bowls and drowned. Safety devices exist to help prevent such accidents. It is highly unlikely for adults or teenagers to drown in toilets due to their larger body size. Injuries to adults include bruised buttocks and tail bones, as well as dislocated hips that have resulted from unexpectedly sitting

on the toilet bowl rim because the seat is up or loose. Injuries can also be caused by pinching due to splits in plastic seats and/or by splinters from wooden seats, or if the toilet itself collapses or shatters under the user's weight. Older high-tank cast-iron cisterns have been known to detach from the wall when the chain is pulled to flush, causing injuries to the user. The 2000 Ig Nobel Prize in Public Health was awarded to three physicians from the Glasgow Western Infirmary for a 1993 case report on wounds sustained to the buttocks due to collapsing toilets. Furthermore, injuries are frequently sustained by people who stand on toilets to reach a height, then slip and fall. There are also instances of people...

Toilet-related injuries and deaths Injuries can also be caused by pinching There have been many toilet-related injuries and deaths throughout history and in urban legends. dislocated hips that have resulted from unexpectedly sitting on the toilet bowl rim because the seat is up or loose bd55e961b4

Squat toilets are used all over the world, but are particularly common in some Asian and African nations, as well as in some Muslim countries. In many of those countries, anal cleansing with water is also the cultural norm and easier to perform than with toilets used in a sitting position. They are also occasionally found in some European and South American countries. bd55e961b4

Toilet Dry toilets are connected to a pit, removable container, composting chamber, or other storage and treatment device, including urine diversion with a urine-diverting toilet. usually for disposal. Flush toilets use water, while dry or non-flush toilets do not. The waste is known as blackwater and the combined effluent, including other sources, is sewage. Lavatory is an older word for toilet. Flush toilets use water, while dry or non-flush toilets do not. They can be designed for a sitting position popular in Europe and A toilet is a piece of sanitary hardware (sanitaryware) that collects human waste (urine and feces) and sometimes toilet paper, usually for disposal. In urban areas, flush toilets are usually connected to a sewer system; in isolated areas, to a

septic tank. "Toilet" or "toilets" is also widely used for rooms containing only one or more toilets and hand-basins. They can be designed for a sitting position popular in Europe and North America with a toilet seat, with additional considerations for those with disabilities, or for a squatting posture more popular in Asia, known as a squat toilet
