Acute exacerbation of chronic obstructive pulmonary disease Exacerbations may be accompanied by increased amount of cough and sputum productions, and a change in appearance of sputum. [citation needed] An abrupt An acute exacerbation of chronic obstructive pulmonary disease (AECOPD), or acute exacerbations of chronic bronchitis (AECB), is a sudden worsening of chronic obstructive pulmonary disease (COPD) symptoms including shortness of breath, quantity and color of phlegm that typically lasts for several days 6a399998a4

The symptoms can be avoided or alleviated by a number of measures. In general, cutting down mite numbers may reduce these reactions while others say efforts to remove these mites from the environment have not been found to be effective. Immunotherapy may be useful in those affected. Subcutaneous injections have better evidence than under the tongue dosing. Topical steroids as nasal spray or inhalation may be used. 6a399998a4 == Signs and symptoms == 6a399998a4

Dust mite allergy wheezing sound when exhaling Bouts of coughing or wheezing that are worsened by a respiratory virus such as a cold or the flu Chest tightness or pain Difficulty Dust mite allergy, also known as house dust allergy, is a sensitization and allergic reaction to the droppings of house dust mites. The mite's gut contains potent digestive enzymes (notably peptidase 1) that persist in their feces and are major inducers of allergic reactions such as wheezing. The mite's exoskeleton can also contribute to allergic reactions. The allergy is common and can trigger allergic reactions such as asthma, eczema or itching. Unlike scabies mites or skin follicle mites, house dust mites do not burrow under the skin and are not parasitic 6a399998a4
