"I Want to Know What Love Is" remains one of Foreigner's best-known songs and most enduring radio hits, charting in the top 25 in 2000, 2001, and 2002 on the Billboard Hot Adult Contemporary Recurrents chart. The song has continued to garner critical acclaim, and is listed as one of Rolling Stone magazine's greatest songs of all time at number 476 in 2004 and at number 479 in 2010.

Members of the group call themselves Allah's Five Percenters, which reflects the concept that ten percent of the people in the world are elites and their agents, who know the truth of existence and opt to keep eighty-five percent of the world in ignorance and under their controlling thumb; the remaining five percent are those who know the truth and are determined to enlighten the eighty-five percent.

For example, 45% (read as "forty-five percent") is equal to the fraction $\frac{45}{100}$, or 0.45. (Similarly, one can also express a number as a fraction of 1,000, using the term "per mille" or the symbol ‰.)

Relative change e. The comparison is expressed as a ratio and is a unitless number. The terms "change" and "difference" are used interchangeably. By multiplying these ratios by 100 they can be expressed as percentages so the terms percentage change, percent(age) difference, or relative percentage difference are also commonly used. case of percent change (relative change expressed as a percentage) called percent error occurs in measuring situations where the reference value is the In any quantitative science, the terms relative change and relative difference are used to compare two quantities while taking into account the "sizes" of the things being compared, i. dividing by a standard or reference or starting value

For example, a space is commonly encoded as %20:. Special characters are replaced with a percent sign (%) followed by two hexadecimal digits representing the character's byte value. Percent-encoding is used to ensure special characters do not interfere with the URI's structure and interpretation a202cbce2f

Like its predecessor, GPT-2, it is a decoder-only transformer model of deep neural network, which supersedes recurrence and convolution-based architectures with a technique known as "attention". This attention mechanism allows the model to focus selectively on segments of input text it

predicts to be most relevant. GPT-3 has 175 billion parameters, each with 16-bit precision, requiring 350GB of storage since each parameter occupies 2 bytes. It has a context window size of 2,048 tokens, and has demonstrated strong "zero-shot" and "few-shot" learning abilities on many tasks. Although it is known as URL encoding, it is also used more generally within the main Uniform Resource Identifier (URI) set, which includes both Uniform Resource Locator (URL) and Uniform Resource Name (URN). Consequently, it is also used in the preparation of data of the application/x-www-form-urlencoded media type, as is often used in the submission of HTML form data in HTTP requests. Percent-encoding is not case-sensitive.

In single transferable voting, the quota acts as an electoral threshold to some degree, and it is possible to achieve it by receiving first-choice votes alone or by a combination of first-choice votes and votes transferred from other candidates based on lesser preferences. It is also a common occurrence in STV to see someone elected with less than the quota. In some mixed-member proportional (MMP) systems, the election threshold determines which parties are eligible for top-up seats in the legislative chamber. Some MMP systems still allow a party to retain the seats they won in electoral districts even when they did not meet the threshold nationally... This threshold is set in different ways in different situations. For

example, in some party-list proportional representation systems, an electoral threshold requires that a party must receive a specified minimum percentage of votes (e.g. 5%), either nationally or in a particular electoral district, to obtain seats in the legislature. a202cbce2f
