Electronic trading platform The term is sometimes also used for the trading software alone. The platforms allow trading from any location, in contrast to traditional floor trading using open outcry. Products traded include stocks, bonds, currencies, commodities and derivatives, through intermediaries such as brokers, market makers, investment banks or stock exchanges, or directly between members of the platform. In finance, an electronic trading platform, also known as an online trading platform, is a software program used to place orders for financial products In finance, an electronic trading platform, also known as an online trading platform, is a software program used to place orders for financial products over a network with a financial intermediary dc2715b1fe

Electronic trading platforms typically stream live market prices and may provide tools such as charting packages, news feeds and account management. Some give individuals access to markets formerly reachable only by specialist firms using direct market access, and some support automated strategies based on technical analysis or high-frequency trading. They are usually mobile-friendly and available for Windows, macOS, Linux, iOS and Android, contributing to the growth of retail investing. dc2715b1fe The company is a member of the Principal Traders Group, an advisory group formed by the Futures Industry Association (FIA). dc2715b1fe

Range-frequency theory and a frequency principle that assigns

each of the categories to the same number of contextual stimuli. Each judgment is a weighted average of what it would

In 2016, HFT on average initiated 10–40% of trading volume in equities, and 10–15% of volume in foreign exchange and commodities. High-frequency traders move in and out of short-term positions at high volumes and high speeds aiming to capture sometimes a fraction of a cent in profit on every trade. HFT firms do not consume significant amounts of capital, accumulate positions or hold their portfolios overnight. As a result, HFT has a potential Sharpe ratio (a measure of reward to risk) tens of times higher than traditional buy-and-hold strategies. High-frequency traders typically compete against other HFTs, rather than long-term investors...

High-frequency trading High-frequency trading (HFT) is a type of algorithmic automated trading system in finance characterized by high speeds, high turnover rates, and high order-to-trade ratios that leverages high-frequency financial data and electronic trading tools. HFT uses proprietary trading strategies carried out by computers to move in and out of positions in seconds or fractions of a second. While there is no single definition of HFT, among its key attributes are highly sophisticated algorithms, co-location, and very short-term investment horizons in trading securities

High-frequency vibrating screens Variable high frequency screen is more versatile to tackle varied material condition like particle size distribution, moisture and has higher efficiency due to incremental increase in frequency. Frequency in high frequency screen can be fixed or variable. Variable high frequency screen is more versatile High-frequency vibrating screens are the most important screening machines primarily utilised in the mineral processing industry. They are used to separate feeds containing solid and crushed ores down to less than 200 µm in size, and are applicable to both perfectly wetted and dried feed. G-force plays important role in determining specific screening capacity of screen in terms of TPH per sqm. have a frequency ranging from 1500 to 9000 RPM. High-frequency vibrating screens usually operate at an inclined angle, traditionally varying between 0° and 25° and can go up to a maximum of 45°. Its high-frequency characteristics differentiate it from a normal vibrating screen. Frequency in high frequency screen can be fixed

or variable. The frequency of the screen is mainly controlled by an electromagnetic vibrator which is mounted above and directly connected to the screening surface. They should operate with a low stroke and have a frequency ranging from 1500 to 9000 RPM. G-force increases exponentially with frequency dc2715b1fe

Algorithmic trading Algorithmic trading is a method of executing orders using automated pre-programmed trading instructions accounting for variables such as time, price, and Algorithmic trading is a method of executing orders using automated pre-programmed trading instructions accounting for variables such as time, price, and volume. In the twenty-first century, algorithmic trading has been gaining traction with both retail and institutional traders. A study in 2019 showed that around 92% of trading in the Forex market was performed by trading algorithms rather than humans. This type of trading attempts to leverage the speed and computational resources of computers relative to human traders dc2715b1fe

Hudson River Trading As of 2021, it accounted for more than 15% of all daily equities trading in the United States. The firm focuses on research and development of automated trading algorithms using mathematical techniques, and trades on over 200 markets worldwide. It was founded in 2002. Hudson River Trading employs over 1,000 people in 14 offices around the world, including New York, Chicago, Austin, Boulder, London, Singapore, Shanghai, Mumbai, and Dublin. of its trading capital overnight (unlike most high-frequency trading firms that hold almost nothing overnight), it operates mid-frequency trading strategies Hudson River Trading LLC is an American quantitative trading firm headquartered in New York City, New York, United States dc2715b1fe

High-touch individual(s) is necessary. Stock trading done by humans. High-touch areas include: medicine, wealth management, reference desk, real estate, and legal dc2715b1fe
