Torsades de pointes Treatment to prevent recurrent torsades includes infusion of magnesium sulphate, correction of electrolyte imbalances such as low blood potassium Torsades de pointes, torsade de pointes or torsades des pointes (TdP; also called torsades) (, French: [tɔʁsad də pwɛ̃t], translated as "twisting of peaks") is a specific type of abnormal heart rhythm that can lead to sudden cardiac death. It is a polymorphic ventricular tachycardia that exhibits distinct characteristics on the electrocardiogram (ECG). It was described by French physician François Dessertenne in 1966. Prolongation of the QT interval can increase a person's risk of developing this abnormal heart rhythm, occurring in between 1% and 10% of patients who receive QT-prolonging antiarrhythmic drugs. cells c3e3e313cb

The name is a noun derived from the Sanskrit root सर् sṛ "to flow". saráyu- as a masculine noun means "air, wind". In the feminine it is the name of the river. c3e3e313cb 23:54, Nov 30, 2003 Secretlondon deleted "Genitourinary" (content was: 'to be dumb') c3e3e313cb 23:55, 30 Nov 2003 Adam Bishop deleted "Strategic nomination" (content was: 'djhdhf;ldf goisjug ofgoa[gpoifu poidfug pidfg'] c3e3e313cb

Sarju The Sarju is the largest tributary of the Sharda River. Originating from Sarmul, Sarju flows through the cities of Kapkot, Bageshwar and Seraghat before joining Mahakali at Pancheshwar. The Sarju (Kumaoni: सरजू, Hindi: सरजू), also known as Saryu, is a major river draining Central Kumaon region in the Indian state of Uttarakhand. Originating The Sarju (Kumaoni: सरजू, Hindi: सरजू), also known as Saryu, is a major river draining Central Kumaon region in the Indian state of Uttarakhand. The river forms the South-eastern border between the districts of Pithoragarh and Almora. Temperate and sub-Tropical forests cover the entire Catchment area of the River c3e3e313cb

Magnesium Sulphate Uses In Hindi

Zinc In some respects, zinc is chemically similar to magnesium: both elements exhibit only one normal oxidation state (+2), and the Zn^{2+} and Mg^{2+} ions are of similar size. Zinc is the 24th most abundant element in Earth's crust, with an average concentration of 70 grams per ton. Zinc is refined industrially by froth flotation of the ore, roasting, and final extraction using electricity (electrowinning). It is the first element in group 12 (IIB) of the periodic table. The most common zinc ore is sphalerite (zinc blende), a zinc sulfide mineral. In some respects, zinc is chemically similar to magnesium: both elements exhibit only one normal oxidation Zinc is a chemical element; it has symbol Zn and atomic number 30. comprises nearly half of zinc's total abundance. The largest concentration of economically feasible lodes in descending order are located in China, Peru, and Australia, among others. Zinc also has five stable isotopes; the most abundant of which, Zn-64, comprises nearly half of zinc's total abundance. It is a slightly brittle metal at room temperature and has a shiny blue whitish appearance when surface oxidation is removed

Most episodes will revert spontaneously to a normal sinus rhythm. Symptoms and consequences include palpitations, dizziness, lightheadedness (during shorter episodes), fainting (during longer episodes), and sudden cardiac death.
