Pregnancy in art A common visual indication is the gesture of the woman placing a protective open hand on her abdomen. pregnant women were also consumers of art, with some special types of work developed for them, including Madonna del Parto images of Mary. In art, as in life, it is often unclear whether an actual state of pregnancy is intended to be shown. This probably persists even in contemporary culture; despite several recent artworks depicting heavily

pregnant women, one writer was "astonished at the shortage of visual images. A research study conducted by Pierre Bourdieu in 1963 found that the great majority of 693 French subjects thought that a photo of a pregnant woman could not, by definition, be beautiful. Historically, married women were at some stage of pregnancy for much of their life until menopause, but the depiction of this in art is relatively uncommon, and generally restricted to some specific contexts. of pregnant women in public visual culture".
