While working on a concept for a new program that would eventually become Lotus Improv, Salas noted that spreadsheets have patterns of data. A tool that could help the user recognize these patterns would help to build advanced data models quickly. With Improv, users could define and store sets of categories, then change views by dragging category names with the mouse. This core functionality would provide the model for pivot tables. e99215c515 == Applications == e99215c515 Israel counts 140 scientists and technicians per 10,000 employees, one of the highest ratios in the world. Citizen science can be used as a methodology in which public volunteers help in data collection and classification, thereby improving the scientific community's capacity. Citizen science observations can be used to uncover general trends in native habitats across broad spatial and temporal scales, extending data collection beyond the capacity of individual researchers. These observations can then be integrated with findings from designed experiments to provide a more complete understanding of natural variation and ecological processes.
