

Difference Between Tropical Evergreen And Deciduous Forest

Tropical evergreen forests of India Small remnants of semi-evergreen forest are found in Odisha state. There are substantial differences between the three major evergreen forest regions. The average annual rainfall is 69-79 inches. Semi-evergreen forest is more extensive than the evergreen formation all over India because evergreen forests tend to degrade to evergreen with human interference. (primary coordinates) GPX (secondary coordinates) Tropical evergreen forests of India are found in the Andaman and Nicobar Islands, the Western Ghats, which fringe Tropical evergreen forests of India are found in the Andaman and Nicobar Islands, the Western Ghats, which fringe the Arabian Sea, the coastline of peninsular India, and the greater Assam region in the north-east a324d61e39

Rainforest These can further split. sub-types which include low microphyll vine forest, Araucarian vine forest, Semi-evergreen vine thicket, and deciduous vine thicket a324d61e39

Seasonal tropical forest Seasonal tropical forest, also known as moist deciduous, semi-evergreen seasonal, tropical mixed or monsoon forest, typically contains a range of tree Seasonal tropical forest, also known as moist deciduous, semi-evergreen seasonal, tropical mixed or monsoon forest, typically contains a range of tree species: only some of which drop some or all of their leaves during the dry season. Drier forests in the Aw/As climate zone are typically deciduous and placed in the Tropical dry forest biome: with further transitional zones (ecotones) of savannah woodland then tropical and subtropical grasslands, savannas, and shrublands. These forests represent a range of habitats influenced by monsoon (Am) or tropical wet savanna (Aw/As) climates (as in the Köppen climate classification). This tropical forest is classified under the Walter system as (i) tropical climate with high overall rainfall (typically in the 1000-2500 mm range; 39-98 inches) and (ii) having a very distinct wet season with (an often cooler "winter") dry season a324d61e39

== Classifications == a324d61e39 The Western Ghats tropical wet evergreen forests are classified into low-, medium-, and high-elevation types. The Western Ghats monsoon forests occur both on the western (ghats) margins of the coastal and on the eastern side where there is less rainfall. These forests contain several tree species of great commercial significance (e.g. Indian rosewood (*Dalbergia latifolia*), Malabar Kino (*Pterocarpus marsupium*), teak (*Tectona grandis*) and Indian laurel (*Terminalia crenulata*)), but they have now been cleared from many areas. In the evergreen forests, there is an enormous number of tree species; at least... a324d61e39 == Botany == a324d61e39

Evergreen Consisting of many different species, the unique feature of evergreen plants lends itself to various environments and purposes. This contrasts with deciduous plants, which lose their foliage completely during the winter or dry season. This contrasts with

polar regions however, forests in these zones can have significant differences in weather

Drought deciduous 37 (2): Drought deciduous, or drought semi-deciduous plants refer to plants that shed their leaves during periods of drought or in the dry season. M. In the spectrum of botany, deciduous is defined as a certain plant species that carries out abscission, the shedding of leaves of a plant or tree either due to age or other factors that cause the plant to regard these leaves as useless or not worth keeping over the course of a year. This phenomenon is a natural process of plants and is caused due to the limitation of water around the environment where the plant is situated. Biologia Plantarum. Deciduous plants can also be categorised differently than their adaptation to drought or dry seasons, which can be temperate deciduous during cold seasons, and in contrast to evergreen plants which do not shed leaves annually, possessing green leaves throughout the year. "Seasonal differences in nitrogen storage in deciduous and evergreen species of a tropical dry forest". A. (June 1995)
