

Flu With Gastro Symptoms

== Definitions == 8e43fdb983 Gastroenteritis is usually caused by viruses; however, gut bacteria, parasites, and fungi can also cause gastroenteritis. In children, rotavirus is the most common cause of severe disease. In adults, norovirus and Campylobacter are common causes. Eating improperly prepared food, drinking contaminated water, or having close contact with an infected person can spread the disease. Treatment is generally the same with or without a definitive diagnosis, so testing to confirm is usually not needed. 8e43fdb983 == Medications == 8e43fdb983 == Signs and symptoms == 8e43fdb983 Although the precise causes of Crohn's disease are unknown, it is believed to be caused by a combination of environmental, immune, and bacterial factors in genetically susceptible individuals. It results in a chronic inflammatory disorder, in which the body's immune system defends the gastrointestinal tract, possibly targeting microbial antigens. Although Crohn's is an immune-related disease, it does not seem to be an autoimmune disease (the immune system is not triggered by the body itself). The exact underlying immune problem is not clear, though it may be immunodeficiency.... 8e43fdb983

Hypochondria Many hypochondriacs focus on a particular symptom as the catalyst of their worrying, such as gastro-intestinal problems, palpitations, or muscle fatigue Hypochondriasis or hypochondria is a condition in which a person is excessively and unduly worried about having a serious illness. disease. Hypochondriacs become unduly alarmed about any physical or psychological symptoms they detect, no matter how minor the symptom may be, and are convinced that they have, or are about to be diagnosed with, a serious illness. Hypochondria is an old concept whose meaning has repeatedly changed over its lifespan. It has been claimed that this debilitating condition results from an inaccurate perception of the condition of body or mind despite the absence of an actual medical diagnosis. An individual with hypochondriasis is known as a hypochondriac 8e43fdb983

Clinical descriptions of ME/CFS symptoms: patients must have at least one symptom in three of five areas: Flu-like symptoms Gets sick from viruses easily Gastro-intestinal symptoms Genitourinary Clinical descriptions of ME/CFS (myalgic encephalomyelitis/chronic fatigue syndrome) vary. The biggest differences between criteria are whether post-exertional malaise (PEM) is required, and the number of symptoms needed. Different groups have produced sets of diagnostic criteria that share many similarities 8e43fdb983

Standard treatment for ulcerative colitis depends on extent of involvement and disease severity. The goal is to induce remission initially with medications, followed by the administration of maintenance medications to prevent a relapse of the disease. The concept of induction of remission and maintenance of remission is very important. The medications used to induce and maintain a remission somewhat overlap, but the treatments are different. Physicians first direct treatment to inducing a remission which involves relief of symptoms and mucosal healing of the lining of the colon and then longer-term treatment to maintain the remission. 8e43fdb983 Anaemia, caused... 8e43fdb983

Gastroenteritis This typically lasts less than two weeks. Symptoms may include diarrhea, vomiting, and abdominal pain. Fever, lack of energy Gastroenteritis, also known as infectious diarrhea, is an inflammation of the gastrointestinal tract including the stomach and intestine. Although it is not related to influenza, in Canada and the United States it is often referred to as "stomach flu". Fever, lack of energy, and dehydration may also occur. Symptoms may include diarrhea, vomiting, and abdominal pain. inflammation of the gastrointestinal tract including the stomach and intestine 8e43fdb983

Gulf War syndrome A wide range of acute and chronic symptoms have been linked to the illness, including fatigue, muscle pain, cognitive problems, insomnia, rashes and diarrhea. S. veterans who served in the Gulf War have an enduring chronic multi-symptom illness. The result was a "clinically based descriptive definition using correlated symptoms" in six symptom groups: Gulf War syndrome (GWS) also known as Gulf War illness or chronic multi-symptom Illness, is a chronic and multi-symptomatic disorder affecting military veterans of the Gulf War (1990-1991). From 1995 to 2005, the health of combat veterans worsened in comparison with nondeployed veterans, with the onset of more new chronic diseases, functional impairment, repeated clinic visits and hospitalizations, myalgic encephalomyelitis/chronic fatigue syndrome-like illness, post-traumatic stress disorder, and greater persistence of adverse health incidents. Approximately 250,000 of the 697,000 U. deployment-related symptoms in 2,030 Gulf War veterans 8e43fdb983

The rotavirus vaccine is recommended as a prevention for children. Treatment involves getting enough... 8e43fdb983 == Common cold == 8e43fdb983 The pathology of ME/CFS is poorly understood, and it can be a difficult condition to diagnose because there is no standard test, many symptoms are non-specific, and because doctors and patients may be unfamiliar with post-exertional malaise. Subgroup analysis suggests that, depending on the applied definition, CFS may represent a variety of conditions rather than a single disease entity.

Capillary leak syndrome It is a phenomenon most commonly witnessed in sepsis, and less frequently in autoimmune diseases, differentiation syndrome, engraftment syndrome, hemophagocytic lymphohistiocytosis, the ovarian hyperstimulation syndrome, viral hemorrhagic fevers, and snakebite and ricin poisoning. to viral infections manifesting themselves by way of flu-like symptoms (like a runny nose), gastro-intestinal disorders (diarrhea or vomiting), or general Capillary leak syndrome, or vascular leak syndrome, is characterized by the escape of blood plasma through capillary walls, from the blood circulatory system to surrounding tissues, muscle compartments, organs or body cavities. Pharmaceuticals, including the chemotherapy medications gemcitabine and denileukin diftitox, as well as certain interleukins and monoclonal antibodies, can also cause capillary leaks. These conditions and factors are sources of secondary capillary leak syndrome, and it is often difficult to diagnose and treat because of its complex pathophysiology and the absence of standardized diagnostic criteria 8e43fdb983

Often, hypochondria persists even after a physician has evaluated a person and reassured them that their concerns about symptoms do not have an underlying medical basis or, if there is a medical illness, their concerns are far in excess of what is appropriate for the level of disease. Many hypochondriacs focus on a particular symptom as the catalyst of their worrying, such as gastro-intestinal problems, palpitations, or muscle fatigue. To qualify for the diagnosis of hypochondria the symptoms must have been experienced... 8e43fdb983

Inflammatory bowel disease Crohn's disease affects the small intestine and large intestine, as well as the mouth, esophagus, stomach and the anus, whereas UC primarily affects the colon and the rectum. Crohn's and UC being distinct diseases, both may present with any of the following symptoms: abdominal pain, diarrhea, rectal bleeding, severe internal Inflammatory bowel disease (IBD) is a group of inflammatory conditions of the colon and small intestine, with Crohn's disease and ulcerative colitis (UC) being the principal types 8e43fdb983

Crohn's disease the acute problem and its symptoms, then maintaining remission of the disease. Certain lifestyle changes can reduce symptoms, including dietary adjustments Crohn's disease (CD) is a type of inflammatory bowel disease (IBD) that may affect any segment of the gastrointestinal tract. The skin rashes may be due to infections, as well as pyoderma gangrenosum or erythema nodosum. Bowel obstruction may occur as a complication of chronic inflammation, and those with the disease are at much greater risk of colorectal cancer and small bowel cancer. Symptoms often include abdominal pain, diarrhea, fever, abdominal distension, and weight loss. Complications outside of the gastrointestinal tract may include anemia, skin rashes, arthritis, inflammation of the eye, and fatigue 8e43fdb983

Management of ulcerative colitis The main symptom of active disease is usually diarrhea mixed with blood, of gradual onset which often leads to anaemia. Ulcerative colitis is, however, a systemic disease that affects many parts of the body outside the intestine. Ulcerative colitis is a form of Management of ulcerative colitis involves first treating the acute symptoms of the disease, then maintaining remission. Serotonin-norepinephrine reuptake inhibitor Since norepinephrine pathways play a role in pain modulation, SNRIs are also widely used for chronic pain conditions such as neuropathic pain and fibromyalgia. Off-label uses include treatments for attention deficit hyperactivity disorder (ADHD) and obsessive-compulsive disorder (OCD). discontinuation symptoms. SNRIs are monoamine reuptake inhibitors; specifically, they inhibit the reuptake of serotonin and norepinephrine. Signs and symptoms of withdrawal from abrupt cessation of an SNRI include dizziness, anxiety, insomnia, nausea, sweating, and flu-like Serotonin-norepinephrine reuptake inhibitors (SNRIs) are a class of antidepressant medications used to treat major depressive disorder (MDD), anxiety disorders, chronic neuropathic pain, fibromyalgia, and menopausal symptoms. These neurotransmitters are thought to play an important role in mood regulation. SNRIs can be contrasted with the selective serotonin reuptake inhibitors (SSRIs) and norepinephrine reuptake inhibitors (NRIs), which act upon single neurotransmitters 8e43fdb983

Since 2022, Gulf War syndrome has been primarily linked to exposure to sub-lethal amounts of organophosphate nerve agents, particularly sarin and cyclosarin, released atmospherically during Coalition attacks on Iraqi chemical weapons facilities. Susceptibility was influenced by an allele in the PON1 gene. Exposure to pesticides containing other organophosphates... 8e43fdb983
