

How Many Weeks For A Full Term Pregnancy

The controversy is not primarily a scientific issue, since knowledge of human reproduction and development has become very refined; the linguistic questions remain debated for other reasons. The issue poses larger social, legal, medical, religious, philosophical, and political ramifications because some people, such as Concerned Women for America, identify the beginning of a pregnancy as the beginning of an individual human being's life. Many of these arguments are related to the anti-abortion movement. In this way of thinking, if the pregnancy has not yet begun, then stopping the process is not abortion and therefore can contain none of the moral issues associated with abortion, but if it is a pregnancy, then stopping it is a morally significant... 77afe9d95d Pregnancy is divided into three trimesters of approximately... 77afe9d95d Conception usually occurs following vaginal intercourse, but can also occur through assisted reproductive technology procedures. A pregnancy may end in a live birth, a miscarriage, an induced abortion, or a stillbirth. Childbirth typically occurs around 40 weeks from the start of the last menstrual period (LMP), a span known as the gestational age; this is just over nine months. Counting by fertilization age, the length is about 38 weeks. Implantation occurs on average 8–9 days after fertilization. An embryo is the term for the developing offspring during the first seven weeks following implantation (i.e. ten weeks' gestational age), after which the term fetus is used until the birth of a baby. 77afe9d95d Signs and symptoms of early pregnancy may include missed periods, tender breasts, morning sickness (nausea and vomiting), hunger, implantation bleeding, and frequent urination. Pregnancy may be confirmed with a pregnancy test. Methods of contraception are used to avoid pregnancy. 77afe9d95d

Beginning of pregnancy controversy Although many anti-abortion advocates have argued that both pregnancy and status of a separate Controversy over the beginning of pregnancy occurs in different contexts, particularly as it is discussed within the debate of abortion in the United States. pregnancy measured this way begins two weeks before ovulation. Because an abortion is defined as ending an established pregnancy, rather than as destroying a fertilized egg, depending on when pregnancy is considered to begin, some methods of birth control as well as some methods of infertility treatment might be classified as causing abortions 77afe9d95d

Crisis pregnancy center A crisis pregnancy center (CPC), sometimes called a pregnancy resource center (PRC) or a pro-life pregnancy center, is a type of nonprofit organization A crisis pregnancy center (CPC), sometimes called a pregnancy resource center (PRC) or a pro-life pregnancy center, is a type of nonprofit organization established by anti-abortion groups primarily to persuade pregnant women not to have an abortion 77afe9d95d

Drugs in pregnancy with usage during the early weeks of pregnancy. Some of the consequences on the babies include physical and mental abnormalities, higher risk of stillbirth, neonatal abstinence syndrome (NAS), sudden infant death syndrome (SIDS), low birthweight, and others. The Food and Drug Administration (FDA) in the United States reports that there are six million pregnancies with at least 50% of the women taking at least one medication. When ibuprofen and naproxen are used within the third trimester, there is a significant increase in the Drugs, including medications and recreational drugs, may have effects during pregnancy on the pregnant woman and fetus that vary from the effects of the drug on people who are not pregnant. Of those who bear children, recreational drug use can have serious consequences to the health of not only the mother, but also the fetus as many medications can cross the placenta and reach the fetus. In addition a reported 5–10% of women of childbearing age use alcohol or other addictive substances 77afe9d95d

Overall, ectopic pregnancies annually affect less than 2% of pregnancies worldwide. Risk factors for ectopic pregnancy include pelvic inflammatory disease, often due to chlamydia infection; tobacco smoking; endometriosis; prior tubal surgery; a history of infertility; and the use of assisted reproductive technology. Those who have previously had an ectopic pregnancy are at much higher risk of having another one. Most ectopic pregnancies (90%) occur in the fallopian tube, which are known as tubal pregnancies, but implantation can also occur on the cervix, ovaries, caesarean scar, or within the abdomen... 77afe9d95d A multiple pregnancy may be the result of the fertilization of a single egg that then splits to create identical fetuses, or it may be the result of the fertilization of multiple eggs that create fraternal ("non-identical") fetuses, or it may be a combination of these factors. A multiple pregnancy from a single zygote is called monozygotic, from two zygotes is called dizygotic, or from three or more zygotes is called polyzygotic. 77afe9d95d In the United States, there are an estimated 2,500 to 4,000 CPCs that qualify as clinics and may also provide pregnancy testing, medical ultrasounds, and other services. Many others operate without medical licensing under varying degrees of regulation. For comparison, there were 807 abortion clinics in the United States as of 2020. Hundreds more CPCs operate outside of the U.S., including in Canada, Latin America, Africa, and Europe. 77afe9d95d Many CPCs are run by Christian groups that adhere to a socially... 77afe9d95d In non-humans, the whole group may also be referred to as a litter, and multiple births may be more common than single births. Multiple births in humans are the exception and can be exceptionally rare in the largest mammals. 77afe9d95d Drugs taken in pregnancy including over-the counter-medications, prescription medications, nutritional supplements, recreational drugs, and illicit drugs may cause harm to the mother or the unborn child. Tobacco, alcohol, marijuana, and illicit drug use while pregnant may be dangerous for the unborn baby and may lead to severe... 77afe9d95d In 2016, complications of pregnancy, childbirth, and the puerperium resulted in 230,600 deaths globally, down from 377,000 deaths in 1990. The most... 77afe9d95d == Hormonal == 77afe9d95d

Multiple birth length of pregnancy (2 weeks fewer than gestation) is 38 weeks with a single fetus. This average decreases for each additional fetus: to 36 weeks for twin A multiple birth is the culmination of a multiple pregnancy, wherein the mother gives birth to two or more babies. Such births are often named according to the number of offspring, as in twins and triplets. A term most applicable to vertebrate species, multiple births occur in most kinds of mammals, with varying frequencies 77afe9d95d

Similarly, the siblings themselves from a multiple birth may be referred to as monozygotic if they are identical or as dizygotic (in cases of twins) or polyzygotic (for three or more siblings) if they are fraternal... 77afe9d95d

Pregnancy It is preterm Pregnancy is the time during which one or more offspring gestates inside a woman's uterus. A pregnancy is considered term at 37 weeks of gestation. A multiple pregnancy involves more than one offspring, such as with twins. who have never carried a pregnancy more than 20 weeks are referred to as nulliparous 77afe9d95d

Complications of pregnancy While some complications improve or are fully resolved after pregnancy, some may lead to lasting effects, morbidity, or in the most severe cases, maternal or fetal mortality. Complications that occur primarily during childbirth are termed obstetric labor complications, and problems that occur primarily after childbirth are termed puerperal disorders. Complications of pregnancy are health problems that are related to or arise during pregnancy. Complications that occur primarily during childbirth are termed obstetric Complications of pregnancy are health problems that are related to or arise during pregnancy 77afe9d95d

Severe complications of pregnancy, childbirth, and the puerperium are present in 1.6% of mothers in the US, and in 1.5% of mothers in Canada. In the immediate postpartum period (puerperium), 87% to 94% of women report at least one health problem. Long-term health problems (persisting after six months postpartum) are reported by 31% of women. 77afe9d95d == Definitions == 77afe9d95d == Trans men == 77afe9d95d Common complications of pregnancy include anemia, gestational diabetes, infections, gestational hypertension, and pre-eclampsia. Presence of these types of complications can have implications on monitoring lab work, imaging, and medical management during pregnancy. 77afe9d95d CPCs have frequently been found to disseminate false medical information about the supposed physical and mental health risks of abortion. They sometimes promulgate misinformation about the effectiveness of condoms and prevention of sexually transmitted infections. CPCs are sometimes called fake abortion clinics by scholars, the media, and supporters of abortion rights due to deceptive advertising that obscures the centers' anti-abortion agenda. 77afe9d95d

Physiological changes in pregnancy During pregnancy numerous hormones and proteins are secreted that also have a broad range of effects. Physiological changes in pregnancy are the adaptations that take place during pregnancy that enable the accommodation of the developing embryo and fetus Physiological changes in pregnancy are the adaptations that take place during pregnancy that enable the accommodation of the developing embryo and fetus. These are normal physiological adaptations that cause changes in behavior, the functioning of the heart, blood vessels, and blood, metabolism including increases in blood sugar levels, kidney function, posture, and breathing 77afe9d95d

The management of labor and delivery may vary depending on the gestational age. It is common to encounter the following terms when describing different time periods of pregnancy. 77afe9d95d

Postterm pregnancy Postterm pregnancy is a pregnancy continuing past the 42nd week of gestation, two weeks beyond the typical 40-week duration of pregnancy. Postmature births Postterm pregnancy is a pregnancy continuing past the 42nd week of gestation, two weeks beyond the typical 40-week duration of pregnancy. Postmature births carry risks for both the mother and the baby, including fetal malnutrition, meconium aspiration syndrome, and stillbirths. Postterm pregnancy is a reason to induce labor. After the 42nd week of gestation, the placenta, which supplies the baby with nutrients and oxygen from the mother, starts aging and will eventually fail 77afe9d95d

Pregnant women experience numerous adjustments in their endocrine system that help support the developing fetus. The fetal-placental unit secretes steroid hormones and proteins that alter the function of various maternal endocrine glands. Sometimes, the changes in certain hormone levels and their effects on their target organs can lead to gestational diabetes and gestational hypertension. 77afe9d95d

Transgender pregnancy This is possible for those born with female reproductive systems. However, transition-related treatments may impact fertility. Transgender men and nonbinary people who are or wish to become pregnant face social, medical, legal, and psychological concerns. Transgender pregnancy is the gestation of one or more embryos or fetuses by transgender people. As uterus transplantations are currently experimental, and none have successfully been performed on trans women, they currently cannot become pregnant. This is possible for those born with female reproductive Transgender pregnancy is the gestation of one or more embryos or fetuses by transgender people 77afe9d95d

Ectopic pregnancy EUP). The pain may be described as sharp, dull, or crampy. This complication has also been referred to as an extrauterine pregnancy (a. Signs and symptoms classically include abdominal pain and vaginal bleeding, but fewer than 50 percent of affected women have both of these symptoms. Pain may also spread to the shoulder if bleeding into the abdomen has occurred. a. k. This complication has also been referred to as an extrauterine Ectopic pregnancy is a complication of pregnancy in which the embryo attaches outside the uterus. Severe bleeding may result in a fast heart rate,

fainting, or shock. With very rare exceptions, the fetus is unable to survive. Ectopic pregnancy is a complication of pregnancy in which the embryo attaches outside the uterus 77afe9d95d
