== Nature of anxiety == cfded70601 SSRIs are the most widely prescribed antidepressants in many countries. In adults, they are recommended as a first-line treatment for moderate to severe depression, while for mild depression non-drug treatments are preferred unless the patient chooses medication. A 2018 meta analysis of 21 antidepressants showed that all antidepressants (including SSRIs) were more effective than placebo in adults with major depressive... cfded70601 Common side effects include headache, nausea, sexual problems, mild sedation, and trouble sleeping. In some patients, sexual dysfunction may persist even after the drug is discontinued, a condition known as post-SSRI sexual dysfunction; regulatory agencies including the European Medicines Agency and Health Canada have recommended that escitalopram's product labeling warn of this risk. More serious side effects may include suicidal thoughts in people up to the age of 24 years. cfded70601

SSRIs primarily work by blocking serotonin reabsorption (reuptake) via the serotonin transporter, leading to gradual changes in brain signaling and receptor regulation, with some also interacting with sigma-1 receptors, particularly fluvoxamine, which may contribute to cognitive effects. Marketed SSRIs include six main antidepressants—citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, and sertraline—and dapoxetine, which is indicated for premature ejaculation. Fluoxetine has been approved for veterinary use in the treatment of canine separation anxiety.

Anxiety is a naturally occurring emotion and response. When anxiety levels exceed the tolerability of a person, anxiety disorders may occur. People with anxiety disorders can exhibit fear responses, such as defensive behaviors, high levels of alertness, and negative emotions. Those with anxiety disorders may have concurrent psychological disorders, such as depression. Anxiety disorders are classified using six possible clinical assessments: cfded70601
