

Who Proposed Five Kingdom Classification

There were two official bids to host Group A Championships. Both systems list disorders thought to be distinct types, and in recent revisions the two systems have deliberately converged their codes so that their manuals are often broadly comparable, though differences remain. Both classifications employ operational definitions. First Five Year Plan (1947-1951) The two most widely used psychiatric classification systems are the International Classification of Diseases, 11th edition (ICD-11; in effect since 1 January 2022.), produced by the World Health Organization (WHO); and the Diagnostic and Statistical Manual of Mental Disorders produced by the American Psychiatric Association since 1952. The latest edition is the Fifth Edition, Text Revision (DSM-5-TR), which was released in 2022. The ICD is a broad medical classification system; mental disorders are contained in Chapter 06: Mental, behavioural or neurodevelopmental disorders (06).

Classification of ethnicity in the United Kingdom A number of different systems of classification of ethnicity in the United Kingdom exist. These schemata have been the subject of debate, including about the nature of ethnicity, how or whether it can be categorised, and the relationship between ethnicity, race, and nationality. These schemata have been the subject of debate, including about A number of different systems of classification of ethnicity in the United Kingdom exist

Five-Year Plans of Argentina To speed up customs and port services, the plan proposed creating a central The Five-Year Plan was Argentina's strategy for economic planning during President Juan Domingo Perón's first term. equipment over five years while expanding Argentina's industry and agriculture

Protist classification In some systems of biological classification, such as the five-kingdom scheme proposed by Robert Whittaker in 1969, the protists make up a kingdom called Protista, composed of "organisms which are unicellular or unicellular-colonial and which form no tissues". systems of biological classification, such as the five-kingdom scheme proposed by Robert Whittaker in 1969, the protists make up a kingdom called Protista, A protist () is any

eukaryotic organism (one with cells containing a nucleus) that is not an animal, plant, or fungus. The protists do not form a natural group, or clade, since they exclude certain eukaryotes with whom they share a common ancestor; but, like algae or invertebrates, the grouping is used for convenience. In the 21st century, the classification shifted toward a phylogenetic classification of protists

The exact definition of taxonomy... a230b76689

2017 IIHF World Championship Division I The decision on who hosts the tournament was decided on May 20, 2016. Group A was contested in Kyiv, Ukraine from 22 to 28 April 2017 and Group B in Belfast, United Kingdom from 23 to 29 April 2017. It marked the first time South Korea had earned promotion to the top tier of the World Championship. The proposed arena was the Odyssey Arena. The bid from the United Kingdom received The 2017 IIHF World Championship Division I was an international ice hockey tournament run by the International Ice Hockey Federation. South Korea and Austria were promoted to the 2018 World Championship

Most bacteria were classified... a230b76689 The plan aimed to streamline all export and import regulations, including product classification, packaging, and quality standards, and to create a customs procedure that fit the needs of the time. It decentralized and diversified industry, forming new productive areas, and placing them properly in terms of natural energy sources, means of communication, transportation and consumer markets. The plan aimed to secure raw materials, fuel, and equipment over five years while expanding Argentina's industry and agriculture. a230b76689 == Cavalier-Smith's classification == a230b76689 == National statistics == a230b76689 Under the three-domain system of taxonomy, introduced by Carl Woese in 1977, which reflects the evolutionary history of life, the organisms found in kingdom Monera have been divided into two domains, Archaea and Bacteria (with Eukarya as the third domain). Furthermore, the taxon Monera is paraphyletic (does not include all descendants of their most recent common ancestor), as Archaea and Eukarya are currently believed to be more closely related than either is to Bacteria. The term "moneran" is the informal name of members of this group and is still sometimes used (as is the term "prokaryote") to denote a member of either domain. a230b76689 Thomas Cavalier-Smith and his collaborators use a fully rank-based classification of protists. Here is their classification: a230b76689 The following groups contain protists. The clade Opisthokonta also contains the animals and the fungi, and the Archaeplastida also contains plants. a230b76689

Manuals of limited use, by practitioners with alternative...
a230b76689 The taxon Monera was first proposed as a phylum by Ernst Haeckel in 1866. Subsequently, the phylum was elevated to the rank of kingdom in 1925 by Édouard Chatton. The last commonly accepted mega-classification with the taxon Monera was the five-kingdom classification system established by Robert Whittaker in 1969. a230b76689 Other classification schemes, used more locally, include the Chinese Classification of Mental Disorders. a230b76689

Classification of mental disorders The classification of mental disorders, also known as psychiatric nosology or psychiatric taxonomy, is central to the practice of psychiatry and other The classification of mental disorders, also known as psychiatric nosology or psychiatric taxonomy, is central to the practice of psychiatry and other mental health professions a230b76689

The Five Year Plan was first announced as a bill to be sent to the Congress, in the presidential message of October 19, 1946. The Article 1st consisted of the "Achievements and Investment Plan" and developed a number of other bills). a230b76689

Cannabis classification in the United Kingdom Cannabis classification in the United Kingdom refers to the class of drugs, as determined by the Misuse of Drugs Act 1971, that cannabis is placed in. Cannabis classification in the United Kingdom refers to the class of drugs, as determined by the Misuse of Drugs Act 1971, that cannabis is placed in. From 2004 to 2009, it was a class C drug. Between 1928 and 2004 and since 2009, it has been classified as a class B drug. At present, it is a class B, with very limited exceptions a230b76689

Taxonomy (biology) include a sixth kingdom, Archaea, but do not accept the domain method. Organisms are grouped into taxa (singular: taxon), and these groups are given a taxonomic rank; groups of a given rank can be aggregated to form a more inclusive group of higher rank, thus creating a taxonomic hierarchy. Modern approaches prioritize common ancestry and evolutionary relationships. The Swedish botanist Carl Linnaeus is regarded as the founder of the current system of taxonomy, having developed a ranked system known as Linnaean taxonomy for categorizing organisms. The principal ranks in modern use are domain, kingdom, phylum (division is sometimes used in botany in place of phylum), class, order, family, genus, and species. Thomas Cavalier-Smith, who published extensively on the classification of protists In biology, taxonomy (from Ancient Greek τάξις (taxis) 'arrangement' and -νομία (-nomia) 'method') is the scientific study of naming, defining (circumscribing) and classifying groups of biological organisms based on shared characteristics a230b76689

British Board of Film Classification The British Board of Film Classification (BBFC, stylized entirely in lower capitals) is a non-governmental organisation founded by the British film industry The British Board of Film Classification (BBFC, stylized entirely in lower capitals) is a non-governmental organisation founded by the British film industry in 1912 and responsible for the national classification and censorship of films exhibited at cinemas and video works (such as television programmes, trailers, adverts, public information/campaigning films, menus, bonus content, etc.) released on physical media within the United Kingdom. The BBFC was also the designated regulator for the UK age-verification scheme, which was abandoned before being implemented. It has a statutory requirement to classify all video works released on VHS, DVD, Blu-ray (including 3D and 4K UHD formats), and, to a lesser extent, some video games under the Video Recordings Act 1984 a230b76689

Monera Chatton. As such, it is composed of single-celled organisms that lack a nucleus. The last commonly accepted mega-classification with the taxon Monera was the five-kingdom classification system established by Robert Whittaker Monera (/mə'niərə/) (Greek: μονήρης (monérēs), "single", "solitary") is historically a biological kingdom that is made up of unicellular prokaryotes a230b76689

Cavalier-Smith's system of classification His classifications complemented his ideas communicated in scientific publications, talks, and diagrams. (1834–1919) proposed the name "Protista" for the primigenial kingdom and included bacteria in this third kingdom of life. Cavalier-Smith used his classifications to convey his opinions about the evolutionary relationships among various organisms, principally microbial. His classifications has been a major influence in the modern taxonomy, particularly of protists. As with classifications of others, such as Carl Linnaeus, Ernst Haeckel, Robert Whittaker, and Carl Woese, Cavalier-Smith's classification attempts to incorporate the latest developments in taxonomy.) By 1959, Robert Whittaker proposed that The initial version of a classification system of life by British zoologist Thomas Cavalier-Smith appeared in 1978. Different iterations might have a wider or narrow scope, include different groupings, provide greater or lesser detail, and place groups in different arrangements as his thinking changed. This initial system continued to be modified in subsequent versions that were published until he died in 2021 a230b76689

As Home Secretary in Tony Blair's Labour government, David Blunkett announced in 2001 that cannabis would be transferred from class B of the Act to class C, resulting in a penalty of up to 2 years in

prison for possession. The penalty for possession would be up to 5 years in prison if it is decided that there was an intent to supply.

Reclassification had the support of a plurality of the public, with surveys at the time finding that 49% of British adults supported cannabis decriminalisation, 36% were against, and 15% were undecided... a230b76689 == Definition == a230b76689 Drug policy (including Cannabis classification) has been a contentious subject in UK politics. A number of senior Scientific advisors have objected the transfer back to class B, notably Professor David Nutt and John Beddington considered the move politically motivated rather than scientifically justified. a230b76689 == History and overview == a230b76689 In mid-1946, the Technical Secretariat of the Presidency started drafting a five-year government plan for 1947-1951.

a230b76689 Cavalier-Smith has published extensively on the classification of protists. One of his major contributions to biology was his proposal of a new kingdom of life: the Chromista, although the usefulness of the grouping is questionable given... a230b76689

With advances in the theory, data and analytical technology of biological systematics, the Linnaean system has transformed into a system of modern biological classification intended to reflect the evolutionary relationships among organisms, both living and extinct.

a230b76689 To speed up customs and port services, the plan proposed creating a central agency, the General Administration of Customs and Ports, which would have more authority than the...
