Brown hair It varies from light to dark brown. Brown hair, also referred to as brunette (when female), is the second-most common human hair color, after black hair 54c0d41e63

The color brown is strongly associated with, and seen widely within, the natural world. Elements of the environment such as minerals, soil and wood are frequently brown in color; consequently, many animals have brown pelts, scales or feathers in order to better camouflage themselves within their habitats. Likewise, brown is often seen in the biology of humans; brown hair, eye color and skin pigmentation are commonplace among humankind. The color is also frequently seen in plant-derived materials such as plant fibers, bark, fruits, nuts... 54c0d41e63

Shades of brown colors on computer and television screens, makes brown by combining red and green light at relatively low intensities, with green light being in a lesser Shades of brown can be produced by combining red, yellow, and black pigments, or by a combination of orange and black—illustrated in the color box. Brown color names are often imprecise, and some shades, such as beige, can refer to lighter rather than darker shades of yellow and red. The X11 color list of web colors has seventeen different shades of brown, but the complete list of browns is much longer. Browns are usually described as light or dark, reddish, yellowish, or gray-brown. The RGB color model, that generates all colors on computer and television screens, makes brown by combining red and green light at relatively low intensities, with green light being in a lesser proportion than red light. There are no standardized names for shades of brown; the same shade may have different names on different color lists, and sometimes one name (such as beige or puce) can refer to several very different colors. Such colors are less saturated than colors perceived to be orange 54c0d41e63

In the RGB color model used to project colors onto television screens and computer monitors, brown is created by mixing the three primary colors: red, yellow, and blue. Specifically, red light is emitted at medium to low intensity, green light at a lower intensity, and blue light with the lowest presence in most shades of the color. In the CMYK color model used in printing and painting, brown is usually made by combining yellow ink with smaller amounts of magenta and black inks. 54c0d41e63

Brown (racial classification) Brown is a racialized classification of people, usually a political and skin color-based category for specific populations with a light to moderate brown 54c0d41e63

Brown television screens and computer monitors, brown is created by mixing the three primary colors: red, yellow, and blue. Specifically, red light is emitted at Brown is a color. It can be thought as a darker, typically desaturated shade of orange, and can often be produced by combining red and yellow with another color, namely blue 54c0d41e63
