Jones's ideas tried to move the public's notion of bodybuilding and strength-training exercise away from the Arnold Schwarzenegger school of training, which involved hours in the gym using free weights, to high intensity training. This involves short, single sets, with each set taken to the point of complete muscular failure with a fullbody workout frequency of three times a week with the intention to maximize muscular hypertrophy and strength increases. (Later in his life, he recommended doing it once or twice a week.) Jones said: "The secret, if there is one, is high intensity. And when you actually train with high-intensity, you don't need a lot of volume." ea33e8da48

Besides the fact that the anus does play a role in life (people actually need it), it's function in anal sex is different from the "main" function. Did evolution cause the second function to appear, because it was an advantage to gain pleasure from anal sex, or is it actually a coincidence that we are able to have anal sex? Also, did the penis also evolve to be able to be inserted into the rectum or is it, again, a mere coincidence that it is?
