

What Is A Sea Cucumber

Cucumber Considered an annual plant, there are three main types: slicing, pickling, and seedless. The cucumber (*Cucumis sativus*) is a widely-cultivated creeping vine plant in the family Cucurbitaceae that bears cylindrical to spherical fruits, used The cucumber (*Cucumis sativus*) is a widely-cultivated creeping vine plant in the family Cucurbitaceae that bears cylindrical to spherical fruits, used as culinary vegetables

Many species of sea cucumbers are foraged as food by humans, and some species are cultivated... Cucumber may also refer to: Green sea cucumbers range from 8 cm when relaxed up to 15 cm when extended. They exhibit a range of colors including green, mottled gray, brown, and black. They have a vermiform shape, swollen in the middle and tapered at the ends. They have thick, papillate, rigid skin with ossicles of knotted buttons, shallow cups, and perforated plates. Tentacles are present around the mouth and numerous cylindrical tube feet or podia surround the body. Sea cucumbers have a leathery skin and an elongated body containing a single, branched gonad; they are named for their overall resemblance to the fruit of the cucumber plant. Like all echinoderms, sea cucumbers have a calcified dermal endoskeleton, which is usually reduced to isolated microscopic ossicles (or sclerites) joined by connective tissue. In some species these can sometimes be enlarged to flattened plates, forming an armoured cuticle. In some abyssal or pelagic species such as *Pelagothuria natatrix* (order Elasipodida, family Pelagothuriidae), the skeleton is absent and there is no calcareous ring.

Actinopyga varians It is found in the Pacific Ocean near Hawaii and also in the Indo-Pacific Ocean. the Pacific white-spotted sea cucumber or Hawaiian sea cucumber, is a species of sea cucumber in the family Holothuriidae. It is found in the Pacific Ocean *Actinopyga varians*, the Pacific white-spotted sea cucumber or Hawaiian sea cucumber, is a species of sea cucumber in the family Holothuriidae

The Cucumbers, a 1980s power pop/new wave band from New Jersey == Description == Description ==

Cercodemas anceps *Cercodema anceps* is a moderately sized sea cucumber, growing. warty cucumber, is a species of sea cucumber found in the warm waters of the Indo-Pacific

Cucumber (disambiguation) type of beetle Sea cucumber (Holothuroidea), a type of animal “Cucumber King” (Nyaung-u Sawrahan), a ruler of the kingdom of Pagan in what is now Burma The A cucumber is an edible fruit commonly used as a culinary vegetable

Actinopyga varians is found in tropical waters, commonly seen in the Western Pacific and the Indo-Pacific. It has been seen in Hawaii, Fiji, the French Polynesia and other islands in Micronesia. It tends to live in depths of about 0–25 m on living corals and surrounding rubble areas of reefs on the crest of the ocean floor. Cucumber (Canadian TV series), a Canadian children's television series originally broadcast in the 1970s Cucumber (card game), a north European card game of Swedish origin

Four sea delicacies *bàoshēnchìdǔ*) are the four highly prized seafoods of Chinese cuisine: abalone, sea cucumber, shark’s fin, and fish maw. As luxury goods, these foods confer prestige

Sea urchin Together with sea cucumbers (Holothuroidea), they make up the subphylum Echinozoa, which is characterized by a globoid. dollars, sea biscuits, and heart urchins

The cucumber is an annual creeping vine that roots in the ground and grows up trellises or other supporting frames, wrapping around supports with thin, spiraling tendrils. The plant can root... The Chinese and Japanese were the first to develop successful hatchery technology for *Apostichopus japonicus*, prized for its high meat content and success in commercial hatcheries. A second species, *Holothuria scabra*, was cultured for the first time using these techniques in India in 1988. In recent years Australia, Indonesia, New Caledonia, Maldives, Solomon Islands and Vietnam have also successfully cultured *H. scabra* using the same technology, which has since been expanded to other species. == History ==

Thyonella gemmata They *Thyonella gemmata*, the green sea cucumber or striped sea cucumber, is a marine Holothurian of the family Cucumariidae within the genus *Thyonella*. Usually they are green to black in color, vermiform, and 8–15 cm in length. *S. but* presence ranges from North Atlantic to Yucatán Peninsula, with occurrences on the West coast of the U. *Thyonella gemmata*, the green sea cucumber or striped sea cucumber, is a marine Holothurian of the family Cucumariidae within the genus *Thyonella*. They contain hemoglobin and exhibit biomedical properties, including against SARS-CoV-2. *S.* They have a complex digestive system and demonstrate regenerative abilities. They inhabit U-shaped burrows 0–6 m in depth and both deposit and filter feed. They are gonochoristic, undergo metamorphosis, and externally fertilize. They are most common along the East coast of the U

Sea cucumber They are benthic marine animals Sea cucumbers are echinoderms from the class Holothuroidea (*HOL*-ə-*thyuu*-*ROY*-dee-ə, *HOH*-lə-). They are benthic marine animals found on the sea floor worldwide, and the number of known holothuroid species worldwide is about 1,786, with the greatest number being in the Asia–Pacific region. Sea cucumbers serve a useful role in the marine ecosystem as detritivores who help recycle nutrients,

breaking down detritus and other organic matter, after which microbes can continue the decomposition process. Sea cucumbers are echinoderms from the class Holothuroidea (/ˌhɒləˌθjʊəˈrɔɪdiə, ˌhoʊlə-/ HOL-ə-thyuu-ROY-dee-ə, HOH-lə-) 59f2fdb91

Cucumber (British TV series), a 2015 British television series 59f2fdb91 The cucumber originates in Asia, in a region extending from India, Nepal, Bangladesh, China (Yunnan, Guizhou, Guangxi), and Northern Thailand, but now grows on most continents, and many different types of cucumber are grown commercially and traded on the global market. In North America, a wild cucumber is a plant in the genera Echinocystis and Marah, though these are not closely related to the cucumber. 59f2fdb91 == Distribution and habitat == 59f2fdb91 They have been cultivated for at least 3,000 years, and were eaten all year round by the Roman Emperor Tiberius. In the Middle Ages, Charlemagne had them grown for him, and the Spanish brought them to the Americas in the Columbian exchange in 1494. World production is led by China with over three quarters of the total. 59f2fdb91

Aquaculture of sea cucumbers In China, sea cucumbers are cultured in integrated multi-trophic systems, along with prawns and some fish species. In these systems, the sea cucumbers feed on the waste and feces from the other species. Aquaculture means the sea cucumbers are farmed in contained areas where they can be cultured in a controlled manner. In this manner, what would otherwise be polluting byproducts from the culture of the other species become a valuable resource that is turned into a marketable product. Sea cucumber stocks have been overexploited in the wild, resulting in incentives to grow them by aquaculture. Aquaculture means the sea cucumbers are Sea cucumber stocks have been overexploited in the wild, resulting in incentives to grow them by aquaculture 59f2fdb91

Actinopyga caerulea Actinopyga caerulea, the blue sea cucumber, is a species of sea cucumber in the family Holothuriidae. Named for its unique blue coloration, this species 59f2fdb91
