Aqueous humour inhibitors. Structures of the eye labeled Another labeled view of the structures of the eye Sectional Anatomy of the Eye in greater detail, showing Anterior The aqueous humour is a transparent water-like fluid similar to blood plasma, but containing low protein concentrations. Blood cannot normally enter the eyeball. It fills both the anterior and the posterior chambers of the eye, and is not to be confused with the vitreous humour, which is located in the space between the lens and the retina, also known as the posterior cavity or vitreous chamber. It is secreted from the ciliary body, a structure supporting the lens of the eyeball b7a468bc57

The exploded-view drawing is used in parts catalogs, assembly and maintenance manuals and other instructional material. b7a468bc57 == Structure == b7a468bc57 As with all of Orbital's first four singles, there was a remix vinyl single of Midnight/Choice, published a week later. Track 1 was the Sasha remix of "Midnight" that had appeared in place of the non-remix version of Midnight on the CD single. There

was also a remix of Choice by British band Eye and I. b7a468bc57

Midnight / Choice band Eye and I. The record sleeve was designed by the usual Orbital collaborator Gavin Fultano (Fultano 90). "Choice" samples, and takes its name from, the track "Annihilation" by the hardcore punk band Crucifix. This single was released in the UK in August 1991. The cover features a label diagram of a dissected "Midnight" / "Choice" is a double A side single released by Orbital b7a468bc57

Exploded-view drawing An exploded-view drawing is a diagram, picture, schematic or technical drawing of an object, that shows the relationship or order of assembly of various An exploded-view drawing is a diagram, picture, schematic or technical drawing of an object, that shows the relationship or order of assembly of various parts b7a468bc57

== Structure == b7a468bc57 The non-pigmented ciliary epithelial cells of the eye synthesize portions of the zonules. b7a468bc57 The meshwork is divided up into three parts, with characteristically different ultrastructures: b7a468bc57 The vitreous humor

is a transparent, colorless, gelatinous mass that fills the space in the eye between the lens and the retina. It is surrounded by a layer of collagen called the vitreous membrane (or hyaloid membrane or vitreous cortex) separating it from the rest of the eye. It makes up four-fifths of the volume of the eyeball. The vitreous body has an average volume of approximately 4 mL in the adult human eye; however, its volume varies significantly between individuals and depends on axial length and refractive status. Highly myopic eyes, which are characterized by increased axial length, may have vitreous volumes... b7a468bc57 == Remixes == b7a468bc57 The tissue is spongy and lined by trabeculocytes; it allows fluid to drain into a set of tubes called Schlemm's canal which is lined by endothelium with blood and lymphatic properties that allow aqueous humor to flow into the blood system. b7a468bc57

The simplest eyes are pit eyes. They are eye-spots which may be set into a pit to reduce the angle of light that enters and affects the eye-spot, to allow the organism to deduce... b7a468bc57 "Midnight" appears on both the UK and US versions of The Green Album, though in different forms: The US edition features an edited version of the track, while the UK edition contains a live version with a significantly different arrangement. "Choice" also appears on the US version of the album. b7a468bc57

Vitreous body the space of Berger, along an S-shaped course mainly below the horizontal. It is labelled "hyaloid canal" in the above diagram. It is not to be confused with the aqueous humor, the other fluid in the eye that is found between the cornea and lens. Vitreous fluid or "liquid vitreous" is the liquid component of the vitreous gel, found after a vitreous detachment. It is often referred to as the vitreous humor (also spelled humour, from Latin meaning 'liquid'), or simply "the vitreous". Mittendorf's dot: A small In human anatomy, the vitreous body (from Latin vitreus 'glassy') is the clear gel that fills the space between the lens and the retina of the eye (the vitreous chamber) in humans and other vertebrates b7a468bc57

Topic maps: Both concept maps and topic maps are kinds of knowledge graph, but

topic maps were developed by information management professionals for semantic interoperability of data (originally for book indices), whereas concept maps were developed by education professionals to support people's learning. In the words of concept-map... b7a468bc57 The eye can be considered as a living optical device. It is approximately spherical in shape, with its outer layers, such as the outermost, white part of the eye (the sclera) and one of its inner layers (the pigmented choroid) keeping the eye essentially light tight except on the eye's optic axis. In order, along the optic axis, the optical components consist of a first lens (the cornea—the clear part of the eye) that accounts for most of the optical power of the eye and accomplishes most of the focusing of light from the outside world; then an aperture (the pupil) in a diaphragm (the iris—the coloured part of the eye), which controls the amount of light entering the interior of the eye; then another lens (the crystalline lens) that accomplishes the remaining focusing of light into images; and finally a light-sensitive part of the eye (the retina), where the images fall and are processed. The retina makes a connection to the brain via the optic nerve. The remaining components of the eye keep it in its required... b7a468bc57

Schlemm's canal Canaloplasty may be used to widen it. It collects aqueous humor from

the anterior chamber and delivers it into Schlemm's canal, also known as the canal of Schlemm, and as the scleral venous sinus, is a circular lymphatic-like vessel in the eye. It collects aqueous humor from the anterior chamber and delivers it into the episcleral blood vessels. as the scleral venous sinus, is a circular lymphatic-like vessel in the eye

Zonule of Zinn Diagram at unmc. com Diagram and overview at webschoolsolutions In human anatomy, the zonule of Zinn (; also called the ciliary zonule or Zinn's membrane after Johann Gottfried Zinn) is a ring of fibrous strands forming a zonule (little band) that connects the ciliary body with the crystalline lens of the eye. These fibers are sometimes collectively referred to as the suspensory ligaments of the lens, as they act like suspensory ligaments. The Zonular fibers are viscoelastic cables, although their component microfibrils are stiff structures. edu Archived 2012-04-14 at the Wayback Machine Diagram at eye-surgery-uk. PMID 1245377. Concept map Concept maps may be used by instructional designers, engineers,

technical writers, and others to organize and structure knowledge. A concept map or conceptual diagram is a diagram that depicts suggested relationships between concepts. Concept maps may be used by instructional designers A concept map or conceptual diagram is a diagram that depicts suggested relationships between concepts b7a468bc57

== Differences from other visualizations == b7a468bc57 Schlemm's canal is an endothelium-lined tube, resembling that of a lymphatic vessel. On the inside of the canal, nearest to the aqueous humor, it is covered and held open by the trabecular meshwork. This creates outflow resistance against the aqueous humor. b7a468bc57

Eye It is part of an organism's visual system. It detects light and converts it into electro-chemical impulses in neurons (neurones). It detects light and converts it into electro-chemical impulses in neurons An eye is a sensory organ that allows an organism to perceive visual information. An eye is a sensory organ that allows an organism to perceive visual information b7a468bc57

The projection of an exploded view is usually shown from above and slightly in diagonal

from the left or right side of the drawing. (See exploded-view drawing of a gear pump to the right: it is slightly from above and shown from the left side of the drawing in diagonal.)

Overview

Eyes with resolving power have come in ten fundamentally different forms, classified into compound eyes and non-compound eyes. Compound eyes are made up of multiple small visual units, and are common on insects and crustaceans. Non-compound eyes have a single lens and focus light onto the retina to form a single image. This type of eye is common in mammals, including humans.

A concept map typically represents ideas and information as boxes or circles, which it connects with labeled arrows, often in a downward-branching hierarchical structure but also in free-form maps. The relationship between concepts can be articulated in linking phrases such as "causes", "requires", "such as" or "contributes to".

It shows the components of an object slightly separated by distance, or suspended in surrounding space in the case of a three-dimensional exploded diagram. An object is represented as if there had been a small controlled explosion emanating from the middle of the object, causing the object's parts to be separated an equal distance away from their original locations.

Trabecular meshwork The trabecular meshwork is an area of tissue in the eye located

around the base of the cornea, near the ciliary body, and is responsible for draining the aqueous humor from the eye via the anterior chamber (the chamber on the front of the eye covered by the cornea) b7a468bc57

The 1991 printing of the CD single feature "Midnight (Sasha Remix)" as track 1, labeled simply as "Midnight". A 1995 printing replace this with the original version of "Midnight". The CD single also included a third track, "Analogue Test 90". b7a468bc57 In higher organisms, the eye is a complex optical system that collects light from the surrounding environment, regulates its intensity through a diaphragm, focuses it through an adjustable assembly of lenses to form an image, converts this image into a set of electrical signals, and transmits these signals to the brain through neural pathways that connect the eye via the optic nerve to the visual cortex and other areas of the brain. b7a468bc57 == Structure == b7a468bc57 The technique for visualizing these relationships among different concepts is called concept mapping. Concept maps have been used to define the ontology of computer systems, for example with the object-role modeling or Unified Modeling Language formalism. b7a468bc57
