== Overview == UCS has a potential capacity of over 1 million characters. Each UCS character is abstractly represented by a code point, an integer between 0 and 1,114,111 ($1,114,112 = 220 \times 216$ or $17 \times 216 = 0x110000$ code points), used to represent each character within... 9054d365fe

Over time, encodings capable of representing more characters were created, such as ASCII, ISO/IEC 8859, and Unicode encodings such as UTF-8 and UTF-16. 9054d365fe

Character encoding Not only can a character set include natural language symbols, but it can also include codes that have meanings or functions outside of language, such as control characters and whitespace. supported all ASCII characters as well as additional non-ASCII characters. Character encodings have also been defined for some constructed languages. While trying to develop universally interchangeable character encodings, researchers Character encoding is a convention of using a numeric value to represent each character of a writing script. The numerical values that make up a character encoding are known as code points and collectively comprise a code space or a code page. When encoded, character data can be stored, transmitted, and transformed by a computer 9054d365fe

After their initial public offering in 2004, AlphaSmart, Inc. was quickly acquired by Renaissance Learning, Inc., in 2005. The last AlphaSmart branded device, named the Neo 2, was released by Renaissance Learning in 2007. 6 years later in late September 2013, production of all AlphaSmart branded devices was discontinued. While AlphaSmart no longer exists as a brand, they have developed a cult following among writers as distraction-free writing devices, supporting a strong secondhand market. 9054d365fe

Citatoriality culture manifestations (consider how frequently a television show like The Simpsons or Mystery Science Theater 3000 makes use of quotes and citations) Citatoriality, in literary theory, is an author's citation (quoting) of other authors' works. Some works are highly citatorial (making frequent use of numerous allusion to and quotations from other works), while others seem to exist in a vacuum, without explicit references to other authors or texts. Citatoriality is often seen as a typical feature of postmodernism, especially in its pop culture manifestations (consider how frequently a television show like The Simpsons or Mystery Science Theater 3000 makes use of quotes and citations). Some

writers, such as the Argentinian writer Jorge Luis Borges, are highly citational (Borges frequently included citations and footnotes in his stories, many of which were entirely made up) 9054d365fe

AlphaSmart , was an education technology company founded in 1992 by Apple Computer engineers Joe Barrus and Ketan Kothari, and Kothari's brother, Manish

Kothari. , formerly Intelligent Peripheral Devices, Inc. The units' durability, long battery life, and limited functionality made them ideal for K-12 classrooms. was meant to be a visual indication that the AlphaSmart 3000 was a USB native device, as many other USB devices were patterned using the iMac's design AlphaSmart, Inc. At the time of their initial release in 1993, the first AlphaSmart models were marketed as smart keyboards designed to promote writing in the classroom as an alternative to expensive computer labs. Later models expanded functionality to spell-checking, running applications, and accessing wireless printers

Animutation was popularized by Neil Cicierega. Cicierega claims to have been inspired by several sources, including bizarre Japanese commercials and Martin Holmström's "Hatten är din" Soramimi-style video made for the "Habbeetik" song by Azar Habib. The term animutation is a portmanteau of animation and mutation and was popularized in 2001 through Cicierega's flash animations such as Japanese Pokérap and Hyakugojuuichi!!, which feature the credits music from older episodes of Pokémon. The popularity of

Hyakugojuuichi!! quickly made it an Internet phenomenon. Since that time, others have adopted a similar style and communities of similarly minded animators have sprung up around the web. These versions made by fans were christened "fanimations". 9054d365fe

In other words, although a signature is supposed to testify to the presence of an... 9054d365fe

Chinese characters Over a documented history spanning more than three millennia, the function, style, and means of writing characters have changed greatly. Writing all of the frequently used vocabulary in a language requires roughly 3500–5000 characters; as of 2025, more than 100000 Chinese characters have been identified and included in The Unicode Standard. Of the four independently invented writing systems accepted by scholars (cuneiform, Egyptian hieroglyphs, Chinese characters, and Maya script), they represent the only one that has

remained in continuous use. Characters are created according to several principles, where aspects of shape and pronunciation may be used to indicate the character's meaning. Without proper rendering support, you may see Chinese characters as logographs used to write the Chinese languages and others from regions historically influenced by Chinese culture, including Japan, Korea, and Vietnam. This article contains chữ Nôm characters used to write Vietnamese and sawndip characters used to write Zhuang. Unlike letters in alphabets that reflect the sounds of speech, Chinese characters generally represent morphemes, the units of meaning in a language

Universal Character Set (abbr. UCS, official designation: ISO/IEC 10646), is an international standard to map characters, discrete symbols used in natural language, mathematics, music, and other domains, to unique machine-readable data values. This avoids the confusion of using multiple legacy character encodings, which can result in the same sequence of codes having multiple interpretations depending on the character encoding in use, resulting in mojibake if the wrong one is chosen. By creating this mapping, the UCS enables computer software vendors to interoperate, and transmit—interchange—UCS-encoded text strings from one to another. type to each character to inform text processors how sequences of characters should be ordered on the page 9054d365fe
