In Cold Blood was an instant critical and commercial success. Considered by many to be the prototypical true crime novel, it is also the second-best-selling book in the genre's history, behind Vincent Bugliosi's *Helter Skelter* (1974) about the Charles Manson murders. Some critics also consider Capote's work the original non-fiction novel, although other writers had already explored the genre, such as Rodolfo Walsh in *Operación Masacre* (1957). In... b7d266985f Capote learned of the quadruple murder before the killers were captured, and he traveled to Kansas to write about the crime. He was accompanied by his childhood friend and fellow author Harper Lee, and they interviewed residents and investigators assigned to the case and took thousands of pages of notes. The killers, Richard Hickock and Perry Smith, were arrested six weeks after the murders and later executed by the state of Kansas. Capote ultimately spent six years working on the book. b7d266985f

In 1989, two electrochemists at the University of Utah, Martin Fleischmann and Stanley Pons, reported that their apparatus containing heavy water had produced anomalous heat ("excess heat") of a magnitude they asserted would defy explanation except in terms of nuclear processes. They further reported measuring small amounts of nuclear reaction byproducts, including neutrons and tritium, both of which are produced by fusion of deuterium, found in heavy water (see Fusion power § Deuterium). The small tabletop experiment involved electrolysis of heavy water on the surface of a palladium (Pd) electrode. The reported results received wide media attention and raised hopes of a cheap and abundant source of energy. b7d266985f

It can also occur during a sudden exposure of the unprotected head to low temperatures A cold-stimulus headache, colloquially known as an ice-cream headache or brain freeze, is a form of brief pain or headache, commonly associated with consumption (particularly quick consumption) of cold beverages or foods such as ice cream, popsicles, slushies, and snow cones. It is caused by a cold substance touching the roof of the mouth, and is believed to result from a nerve response causing rapid constriction and swelling of blood vessels, "referring" pain from the roof of the mouth to the head. A cold-stimulus headache is distinct from dentin hypersensitivity, a type of dental pain that can occur under similar circumstances. It can also occur during a sudden exposure of the unprotected head to low temperatures, such as by diving into cold water b7d266985f

Second Cold War complex, harder to manage, and last much longer". In September The terms Second Cold War, Cold War II, and New Cold War have been used by scholars and journalists to describe heightened geopolitical tensions in the 21st century post-Cold War era, usually between the United States and NATO on one side and Russia or China (or both) on the other. In the early post-Cold War era, the terms were used sparingly and variously for past predictions. Some commentators have used the terms as a comparison to the original Cold War, while others have discouraged their use to refer to any ongoing tensions. In the 20th century, the terms were previously referred to one of later phases of the original Cold War. He further wrote that comparing the old Cold War to the ongoing rivalry "is a

They spread through the air or indirectly through contact with objects in the environment, followed by transfer to the mouth or nose. Risk factors include going to child care facilities, not sleeping well, and psychological stress. The symptoms are mostly due to the body's immune response to the infection rather than to tissue destruction by the viruses themselves. Over the years, the terms have been increasingly used to describe the United States's and NATO's heightened tensions with Russia, which is regarded as the successor state to the Soviet Union, which led the Eastern Bloc during the original Cold War. Cold War The Cold War was a period of international geopolitical rivalry between the United States (US) and the Soviet Union (USSR) and their respective allies The Cold War was a period of international geopolitical rivalry between the United States (US) and the Soviet Union (USSR) and their respective allies, the capitalist Western Bloc and communist Eastern Bloc. The term cold war is used because there was no direct fighting between the two superpowers, though each supported opposing sides in regional conflicts known as proxy wars. It began in the aftermath of the Second World War and ended with the dissolution of the Soviet Union in 1991. In addition to the struggle for ideological and economic influence and an arms race in both conventional and nuclear weapons, the Cold War was expressed through technological rivalries such as the Space Race, espionage, propaganda campaigns, embargoes, and sports diplomacy b7d266985f
